Media Product

Media Forms

PatronApp aims to improve Patronaat's online communication and reach by making international visitors feel more included through a creative, interactive, and personal approach. This app, based on extensive research and design thinking process, allows its users to connect with new people based on shared music taste, interest and cultural backgrounds. Because of its multiple features it appeals to a wide range of customers and allows for a more personalized experience.

Alongside the basic features like providing users the possibility of keeping track of the venue's agenda, ticket booking and account creation, PatronApp features interactive venue lighting sync, personalized recommendations based on Spotify and Apple Music, a map feature for users to showcase their cultural background and nationality, automatic language setting based on the user's phone language, community-building through games and group creation, and exclusive Patronaat+ membership with various benefits.

PatronApp, being the concept chosen by the client for further development, is the main media product for this project. The already existing prototype has been further developed, with the main focus being the social and community building features, in addition to a few others like discounts and an AR feature. Full description of all features to be found in Appendix A.

Besides the Patronapp prototype, 2 short form videos have been made. These videos are an example of what the exclusive Patronaat+ content would look like. The videos showcase what it's like behind the scenes at Patronaat, how people get ready for a show and who's needed to make such a show happen.

Results

Mobile apps are crucial for businesses as they enable enhanced customer engagement, facilitate seamless communication, provide personalized experiences, offer convenience and accessibility, foster community building, and provide a competitive edge in today's digital world (Froehlich, 2022).

Patronaat was looking for a way to enhance their online presence and engagement with a creative, interactive, and personalized approach that would foster inclusivity and appeal to international visitors. PatronApp features a multilingual interface that automatically adapts to the language setting of the user's phone. Multi-language support is essential for apps as it allows them to reach a wider audience, improve the user experience, create a sense of inclusivity and accessibility, and establish trust and credibility with users (McLean, 2020).

Innovative features like show recommendations based on personal music taste, interactive games at the venue and multiple features focus on creating a sense of community and inclusivity make PatronApp an ideal solution for Patronaat to reach their set out objective.

Creative Process

Before PatronApp was created, a lot of prior research and ideation had been done. The process started with qualitative target group research, in the form of interviews, a survey and a handful of other empathy methods. This research helped define the problem and create a design question. After this, during the ideation stage, the team came up with multiple concepts that were suitable for the target group, one of these being PatronApp.

The prototype for PatronApp started with sketching the user interface using Adobe XD. This allowed the team to visualize the layout and flow of the app's features. Next, the actual user interface was created, incorporating exciting images and graphics to enhance the visual appeal and usability of the app. The images used in the PatronApp were primarily captured at the Patronaat venue, providing an authentic and immersive visual experience for users, connecting them to the venue, and enhancing the overall app's ambiance and branding. This prototype was then tested with the target audience and was iterated based on the feedback received.

During the second part of the creative process, the production, the main focus were the features most complimented by the client. Patronaat is really trying to showcase their values in everything they do, meaning inclusivity and community were 2 of the most important aspects to focus on. This was obviously not only based on what the client wanted, but also the target audience: the internationals, who often don't feel heard by the locals and end up missing out on many experiences, simply because they don't feel welcome. So the center of attention during the production process was enhancing the social, community development features and also market the app as such; creative and personalized to anyone's needs and wishes.

App Demo

PatronApp is designed as a comprehensive mobile application with the goal of enriching the concert experience for users. It offers a range of core features that enhance convenience and engagement. Alongside the core features, The PatronApp offers exclusive features to make it more appealing for users to download the app and to distinguish it from other venue apps available in the market. Check Appendix A for a full description of all PatronApp features.

Visual Guidelines

Listed below are the visual guidelines of PatronApp. Visual guidelines set the standards for the usage and application of a brand's key visual elements such as fonts, colors, logo, imagery and photography, iconography, layout, and brand voice and tone (Bynder, 2022).

Logo

Font Used (UI): Helvetica

Helvetica Neue is considered one of the best fonts for app UI design due to its simplicity and clarity. With its clean and straightforward design, Helvetica Neue offers a neutral aesthetic that is easy to read on various devices and screen sizes. Its balanced letterforms and consistent spacing ensure legibility and enhance the user experience, allowing users to effortlessly navigate through the app's interface and access content with ease (Shwedoff, 2022).

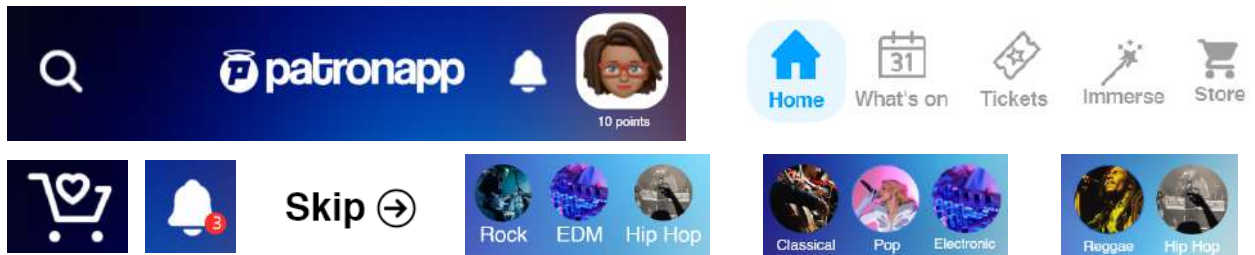

Imagery and photography

Using vibrant gradients effectively conveys a sense of energy and dynamism within the app's interface. The photographs predominantly originate from Patronaat events and their posters, selected for their high-quality and professional nature that evoke a feeling of adventure and exploration. Applying a warm color filter to all images ensures a consistent look and feel throughout the app. Throughout the making of the design, it was crucial to ensure that the images selected reflect diversity and inclusivity, creating an inclusive user experience.

According to Mpeggs (2022) an expert in UX/UI design, Inclusivity is vital in UI design to ensure equal access, representation, and a positive user experience for all individuals, regardless of their background or abilities.

Iconography

Icons utilized are kept simple, intuitive, and line-based, using a consistent 24px x 24px size across various designs while maintaining uniform stroke weight and style.

Layout and composition

The layout follows a 12-column grid system for consistency, with a 16px margin around content blocks, and maintains uniform alignment and spacing between elements.

Brand voice and tone

To reflect a youthful and playful brand personality, bold and energetic visuals are used. Emojis are incorporated in the UI texts to create a more casual tone. Round shapes and patterns are utilized to convey a modern and dynamic vibe, while vibrant color overlays or gradients are applied to enhance depth and excitement in the visuals.

BTS videos

As one of the features for the PatronApp, “behind the scenes” videos would be apart of the exclusive content for paid membership. The main objective for those videos is to introduce the patronaat’s crew, their roles and responsibilities and in general to showcase the inner works of the music venue. The reason for that is to make sure that the people recognize Patronaat as community and see the venue from a more personal perspective so that it’s a vehicle for possible connections with others.

To properly explain the concept, ZOOTS produced two pilot videos that illustrate the idea (see Appendix C.). However, before filming, the team has made multiple script templates to show how the videos can be filmed after handover (see Appendix B). It is to assure that the people taking over, will have a clear idea of what is expected and will be able to carry out the production by themselves. Each template focuses on personal approach but in a different way and requires different set of skills. For instance, Template #1 (see Appendix B.1.) is editing-heavy as it combines clips showing person’s role but it’s very dynamic as it syncs multiple short clips to the music similar in form to the TikTok by Idaafilms (2023). It’s a good way to introduce members of the tech crew as it can combine clips of their work and then results from the shows.

Template #2 (see Appendix B.2.) requires the least skills, both for filming and editing, as it can combine clips shot by the crew member themselves (could be by their phones) and in the editing it only needs to combine the clips together and add captions for for each clip explaining what is happening there. The format is similar to the video by Warren Tech Sound Live (2023) and it’s very low-effort. It’s a way to show the employee’s perspective and explain their role, it’s especially useful for less know roles that people might want to know more about.

Template #2.2 (see Appendix B.3.) is similar in style to the previous one but it’s a bit more personal and shows the employee’s perspective. Moreover, instead of caption, it has a voiceover where the person can explain what’s going on in the video. Because of that, it has a bit of character of “the day of” which is similar to Deimeke’s TikTok (2022).

Lastly, Template #3 (see Appnedix B.4.) is one with the least personal approach since while it does show cre member’s work, it focuses on the task and the result rather than the person themselves. That’s because it consists of a timelapse (or could be a series of shorter shots) showing the process and its progress, after which there’s a cut to the clip showing off the results (preferably during the show to maximize the effect on the audience). It would be a mix of the format of M.’s TikTok (2023) and Barstool Sports’ video (2023) since the timelapse showcases perfectly how complicated cetrain tasks might be and it combines the dynamic transition (preferable with uip-beat music) to keep the audience engaged.

Initial plan was to use footage filmed in Patronaat, but due to change of plans, the team had to use stock footage. First video that was produced, followed the template #2 but in this case, we wanted to show a different application of it, since instead of just introducing one crew

member, we did multiple people. This format was chosen as it gives the audience the chance to meet the crew which can be used as the introduction with a follow up video focused on one of the members. That's what was done with the second pilot episode which followed template #2.2. It shows the work of one person and what she does on day-to-day basis. Also, it gives a glimpse into her personal perspective on Patronaat and atmosphere there.

Pilot videos are supposed to be shot in the Patronat as all of the future videos would also be filmed there. The reason why is that the venue is the centre here and thus introduction of it as the community. Moreover, thanks to that, any location fees could be avoided. Since the videos are just a part of the PatronApp, the costs and extra input is kept to the minimum so even the shooting gear could be just person's phones. Of course, there should be a person responsible for editing the videos to not give the crew extra tasks, but it might as well be one of Patronaat's interns or volunteers. The editing would be minimal so simple mobile app could be used to do so.

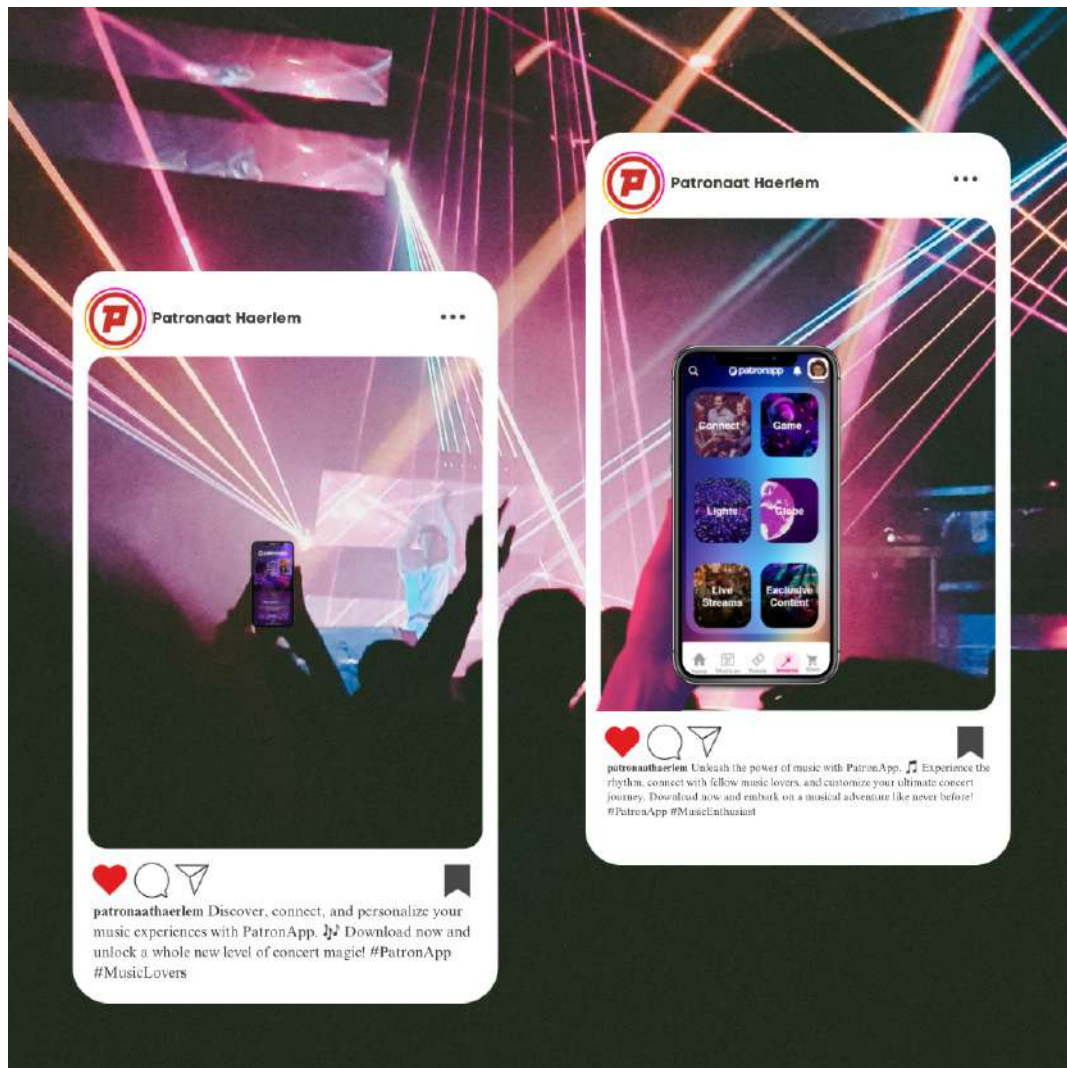

The videos are supposed to be genuine and personal so there won't be any actual scripts that the crew has to follow and they can be spontaneous with the content they choose to film. Because of that, the preparation is minimal and the shooting wouldn't be long, as the crew could film as they work which means that it could be done within one working day. As previously mentioned, the editing would be simple, so it could be done the next day and then the video is ready to publish.

To make sure that the audience with membership feels like the subscription is worth it, the videos should be posted regularly, but could be kept to weekly or even bi-weekly uploads. This would allow the Patronaat to always have some time to film new videos and keep a few extra ones in case they can't film regularly.

Marketing campaign (example content)

In the marketing campaign, the focus is on enhancing the marketing communications for PatronApp by incorporating promotional post, posters and captivating videos. The aim is to align with the AIDA model and effectively promote the app's key features. These creative assets will generate awareness, capture interest, create desire, and encourage action among the target audience. The promotional post, posters and videos will drive app downloads and engagement by visually showcasing the app's benefits. The accompanying visuals can be accessed in Appendix H, showcasing posts, promotional posters and the captivating promotional video for PatronApp.

Figure 1. *Example posts for marketing campaign*

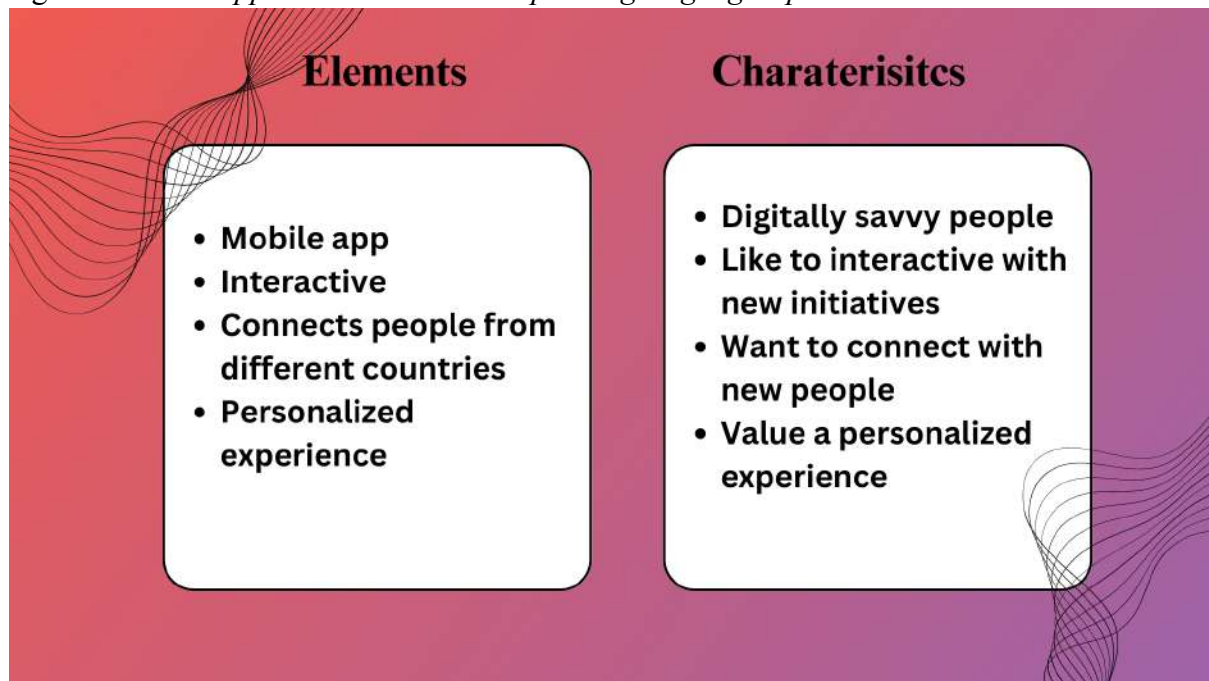

Note. Figure was made by the author

Target group analysis

In order to determine whether a concept will have a chance of success amongst the target group, an analysis of this audience is a vital step. In this case instead of researching if the concept fits the audience, the extent to which the target group fits the concept was researched, following a few key steps: unraveling the concept into elements, translating elements to audience characteristics and researching these characteristics.

Figure 2. *PatronApp elements and corresponding target group characteristics*

Note. Figure was made by the author.

To research the characteristics presented in Figure 1, the Cultural Target Group Model was chosen. This market segmentation model, created by Rotterdam Festivals (2021), divides the cultural audience in the Netherlands into 3 groups, 11 subgroups, and was made specifically for businesses in the cultural sector, such as Patronaat, to help them get an insight into their existing and potential visitors. Out of the 11 subgroups, 3 almost perfectly matched up with the characteristics that were being researched: *the cultural omnivores, the upcoming cultural detectives and the curious future grabbers*.

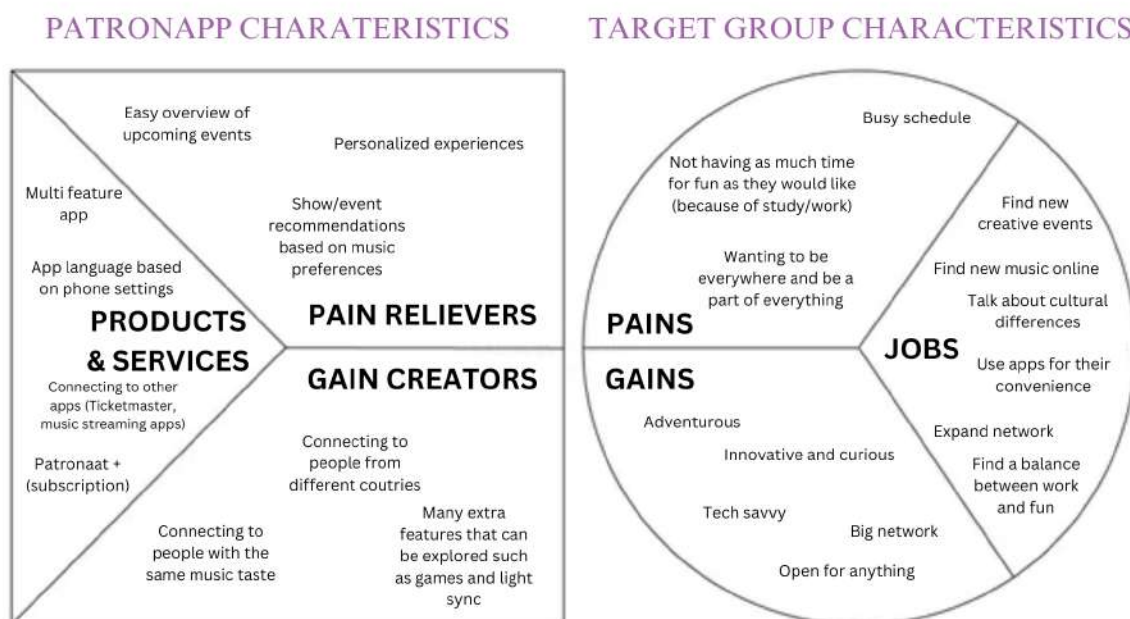

The Cultural Omnivores are eager to engage with new initiatives around the city, and always looking to create new memories as well as expanding their network with young creative professionals, like themselves. Their tech-savvy nature leads them to use innovative apps that present them an easy way to find new musical events happening in their area.

The Upcoming Cultural Detectives, a vibrant and curious group, are known for their love for music streaming and social apps. This group is also big on expanding their network as they want to meet people with the same passion as them. They are also interested in exploring other cultures. As they continue to explore and immerse themselves in diverse cultural experiences, they are on their way to becoming a part of *the cultural omnivores*.

The Curious Future Grabbers, a dynamic and forward-thinking group, just at the beginning of their cultural experience. They seek out new experiences, with new people in new places. They are digitally savvy, always up to speed on the latest trends and developments on social media. One of their core interests is in other cultures; they are eager to connect with people from different backgrounds. In five years this group will have become *the upcoming cultural detectives*.

The suitability of PatronApp for these 3 target groups has been determined using a value proposition canvas as it helps visualize and organize the understanding of the customers needs and the intentions to create value for that customer (Osterwalder et al., 2015).

Figure 3. *Value proposition canvas PatronApp*

Note. Figure was made by the author.

PartonApp requires the audience to be digitally savvy and open to interactions with new initiatives, in addition to being open to new connections and valuing a personalized experience. Based on the value proposition canvas in Figure 2, we see that these elements align with the wishes and needs of the 3 presented target groups. The app is a great way for the target groups to easily find new music and events of their preference, because of the personal aspect of the app. It also encourages connection between people from different backgrounds and creates a platform for everyone to find something of their liking.

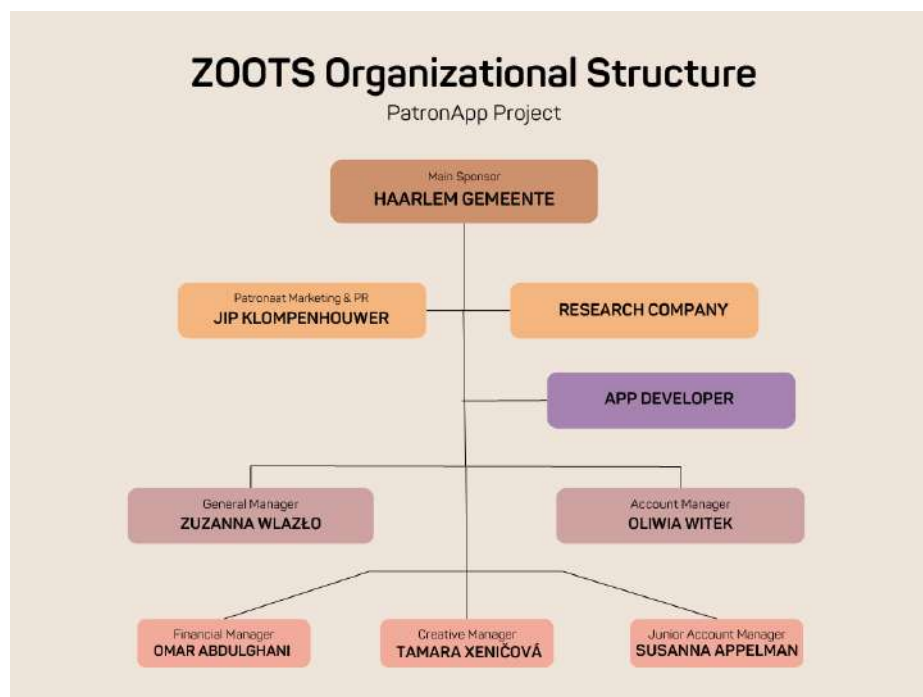

Organizational Structure

On top of the structure is Haarlem Gemeente as the main sponsor of both research and possible app development. Then, Jip as the client's spokesperson stands between the sponsor, ZOOTS and two other companies that are joining the project. Since PatronApp project is still in early stages and Patronaat has an external party carrying out the research for them, the research company from Tilburg is currently on the same level as Jip. That's because their findings will determine the direction in which the app will go and to what extent ZOOTS' work can be actually utilised.

In later stages, app developer will come into play but as the project is still in research and demo stage, it's only there to indicate its position. However, now they have no actual role in the project.

Finally, ZOOTS' general manager and account manager are next as they are the representatives of the team and will stay in touch with Jip and other important stakeholders. After the research is completed, ZOOTS can help with adjusting their plan to the results, in case it differs from their own findings.

Figure 4. *ZOOTS Organizational Structure*

Note. Figure was made by the author. Represents the structure of ZOOTS during the PatronApp project.

Marketing Communication Plan

Metrics & Goals

To measure the success of PatronApp, a similar app was used for comparison. The O2 music venue app developed by GreenCopper allows users to explore event listings, purchase tickets, and stay connected with O2 Academy venues in the United Kingdom (*O2 Academy App*, n.d.). They likely utilized a combination of targeted marketing campaigns, partnerships with artists and promoters, leveraging the O2 brand's reputation, offering exclusive perks and benefits, and utilizing digital channels and social media platforms to increase awareness and engagement with their target audience.

- O2's average app downloads: 500,000
- O2's Facebook and Instagram reach: 10 million users
- O2's website traffic from social media: 100,000 visitors
- O2's social media engagement: 10,000 likes, shares, comments, and mentions

Based on this information, metrics and goals were made for PatronApp. The marketing communication plan aims to promote PatronApp, generate awareness and interest among the target audience, drive app downloads, and increase Patronaat+ membership sign-ups.

Awareness

- Reach: Patronaat has 45,000 Facebook followers and 12,500 Instagram followers and aims to reach an audience of approximately 30,000 users through Facebook and Instagram campaigns by the first year (Writer, 2023).
- Website Traffic: Aim for 5,000 monthly visitors from the ad campaigns to the Patronaats website by the first year.
- Impressions: Estimate a total of 500,000 impressions generated from the Facebook and Instagram campaigns and (D)OOH by the first year.
- Social Media Engagement: Aim for 500 combined likes, shares, comments, and mentions of Patronaats' Facebook and Instagram posts by the first year.

Downloads

- Target 5,000 app downloads from Apple App Store and Google Play Store by the first year.
- Aim for a conversion rate of 10% from users who complete desired actions within PatronApp, such as making in-app purchases by the first year.
- Strive to maintain a 30% retention rate of PatronApp users becoming active members by the first year.
- Monitor user reviews, ratings, and feedback for PatronApp to understand user satisfaction and identify areas for improvement (*Mobile App Engagement Metrics: Terms, Tactics, and Trends to Watch Out For*, n.d.).

Patronaat+ membership signups

Aim for a conversion rate of 5% from active app users to membership signups, resulting in 25 signups by the first year.

5P's of Marketing Mix

According to CFI (2023), to strategically position a business, marketing professionals use the 5 P's of Marketing: Product, Price, Promotion, Place, and People. These elements, also known as the marketing mix, are under the control of business owners and managers and can be manipulated to meet customer needs, add value to their business, and differentiate themselves from competitors. The 5 P's of Marketing are key components in developing a successful marketing strategy.

Product: PatronApp is a mobile application designed to enhance Patronaat's online communication and reach by providing an interactive, personalized, and creative approach. At its core, the app helps music fans connect, discover new events and artists, and personalize their experiences at Patronaat. Among the features that PatronApp offers are event information, live streaming (sync to TV) ticket purchasing, social networking, interactive lighting synchronization, personalized recommendations, community-building, and Patronaat+ membership with various exclusive benefits.

The benefits of the Patronaat+ membership are having access to live streams of shows performed in Patronaat, and exclusive content such as behind-the-scenes and/or shows filmed by the venue like the "Patronaat on the Road" mini-series (for example the first and second episode of "Patronaat on the Road" are accessible to all, but the subscription has full access of the episodes).

- **Tier 1 - Patronaat+ Squad (Free)**

Free and available to all app users. It includes features such as access to the venue's event calendar, push notifications about upcoming events, and the ability to purchase tickets through the app, making use of the app's interactive and gaming features.

- **Tier 2 - Patronaat+ Superfan (€8.99/month)**

Alongside Squad features this tier includes additional features such as early access to ticket sales, discounts on merchandise, exclusive access to pre-show soundchecks, and meet-and-greets with the band or artist.

- **Tier 3 - Patronaat+ VIP (€16.99/month)**

This is the highest level of membership with the most exclusive benefits including tier two and three features plus additional benefits such as access to live streams of shows performed in Patronaat, exclusive content like behind-the-scenes footage, and access to shows filmed by the venue like the "Patronaat on the Road" mini-series and others.

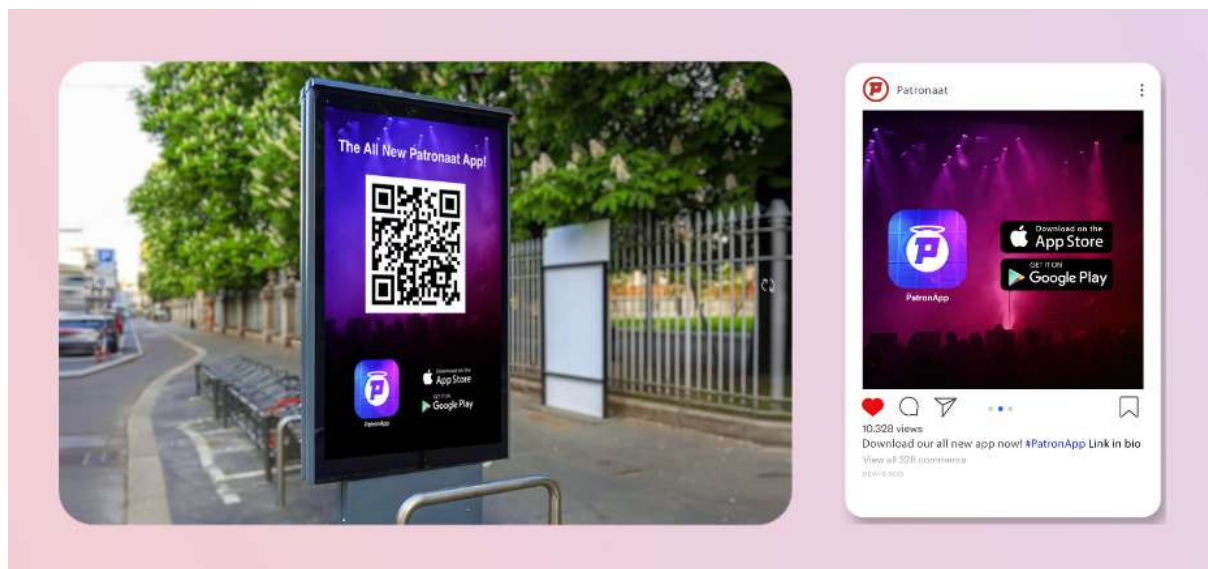

Price: The PatronApp will be offered as a free download on both iOS and Android app stores, allowing easy access to all users. However, Patronaat+ memberships start from €8.99 per month Euros (monthly or yearly with discounts on the annual package). These prices were formulated by looking at pricing for similar membership programs offered by other music venues and entertainment companies.

Promotion: Patronaat has several promotion strategies at its disposal to generate interest and drive downloads for PatronApp. To maximize its reach, Patronaat will utilize a combination of Paid, Owned, and Earned media (Marketing GC, 2023).

Owned media: The announcement of PatronApp will be prominently displayed on Patronaat's website, which is the primary online destination for the organization's loyal customers. Furthermore, email marketing can be employed alongside the tickets that are usually emailed to the customers who purchased the tickets. An introduction to PatronApp and a hyperlink to the download page will be added at the end of the email.

Paid media: Patronaat will also utilize its current social media channels such as Facebook and Instagram to target specific audiences with online ads. This approach will help to increase the visibility of PatronApp and drive downloads among potential customers who may not be aware of the product yet. Moreover, promoting the app through digital out-of-home (DOOH) advertising can positively impact the climate crisis by reducing air pollution, energy consumption, and waste generation compared to traditional outdoor advertising methods (Queiroz, 2022). DOOH could be placed in the Grote Markt, bus stops, train station Haarlem and Haarlem Spaarnwoude, Pathe Cinema, and other music venues such as Philharmonie (which is now known as Phil).

Figure 5. *Marketing campaign content examples*

Note. Figure was made by the author.

Earned media: In addition to the above strategies, Patronaat will also seek to generate buzz and excitement for PatronApp through earned media. This includes influencer outreach, media relations, and other activities that can help to generate positive coverage and word-of-mouth recommendations for the app. Example of influencers that Patronaat can collaborate with would be mentioned in the social media strategy.

Note: In all promotion strategies, customers would be informed to download the app to receive a promo code for a discount on their next ticket purchase. This discount can be used on both the mobile app and the website. And there is a one-week free trial for users to experience the Patronaat+ membership.

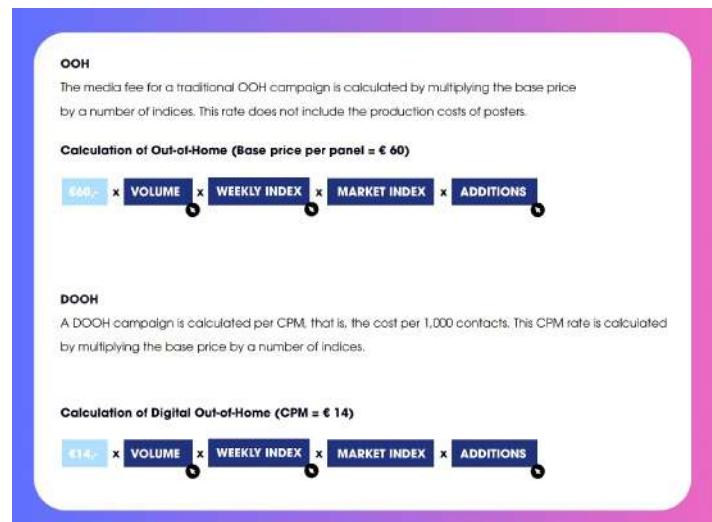

Place: The PatronApp will be available for download on both iOS and Android app stores, making it accessible to users worldwide. The target audience would reach by QR codes & Hyperlinks that lead to the download page that is used in email marketing, social media advertising, and DOOH.

People: The success of the PatronApp will also depend on the people who use it, including the venue staff who will manage the app and the users who will engage with it. To ensure a positive user experience, Patronaat could offer training and support for staff and encourage user feedback to continually improve the app's features and usability. Customer service would be a chatbot with the most asked questions, and Patronaat's email & phone number would be displayed if customers want to contact real staff.

Budget allocation:

The client gave a budget of 2,000 euros for marketing after reading the Project Plan. The marketing strategy for PatronApp includes allocating 500 euros to Facebook Ads, targeting the existing 45,000 Facebook followers, and utilizing the lookalike audience feature. Another 500 euros is allocated to Instagram Ads, targeting the existing 12,500 Instagram followers and their networks, and focusing on engaging visuals and collaborations with influencers. For OOH, 600 euros is allocated to strategically place ten ads in high-traffic areas, considering a cost of 60 euros per panel per week (*Rate-card-2022_Global*, 2022). Or there's also the option to choose using DOOH which charges 14 Euros per CPM. We recommend using OOH rather than DOOH, because DOOH campaign is much more expensive.

Furthermore, 400 euros is allocated to the influencer posts. There's also the opportunity to not pay the influencers financially but by giving them the exclusive access and experiences of PatronApp or free tickets of concerts.

PatronApp Launching Schedule

To meet the challenging timeframe, ZOOTS will focus on delivering a usable demo version of the app, while external companies like Lizard Global and Supercharge can handle the technical development. ZOOTS' expertise will be directed towards creating high-quality designs and a compelling marketing strategy. Hiring Lizard Global or Supercharge, with their experience in UX, mobile apps, and digital strategies, would ensure professional implementation and increase the chances of a successful campaign. Launching schedule can be found in the Appendix...

PatronApp - Social media strategy

In this chapter, the utilization of the AIDA model is explored to determine how marketing messages should be crafted and distributed to the target audience. The AIDA model provides a framework that outlines the sequential stages a consumer typically goes through when interacting with a marketing message or advertisement, namely Attention, Interest, Desire, and Action (Sellers, 2022).

AIDA model

Awareness

1. Select Instagram and Facebook as the primary social media platforms to leverage popularity and reach among the target audience.
2. Develop a compelling brand awareness campaign using visually appealing content like images, videos, and carousel posts.
3. Collaborate with local music influencers and bloggers to promote the app and increase brand awareness.
4. Utilize the influencers' reach and credibility to introduce the app to their followers and create buzz.
5. Encourage influencers to share their personal experiences with the app and highlight its unique benefits and features.
6. Incorporate influencer-generated content in the brand awareness campaign to attract the attention of their followers.
7. Utilize relevant and popular hashtags to increase visibility and reach, both in the influencers' posts and the brand's own content. Examples include [#PatronApp](#), [#MusicLovers](#), [#PatronaatPlus](#), [#MusicExperiences](#), and [#LiveMusicAtHome](#). *Locally used hashtags: #haarlem #netherlands #holland #haarlemcity* (TagsFinder.com, n.d.). *Local music-related hashtags which are specific to the Haarlem audience: #livemusicvenue #musicvenue #supportlivemusicvenues #musicvenues #livemusicvenues #supportlocalmusicvenues* (Display Purposes - Best #Musicvenue Hashtags for Instagram, TikTok, YouTube in 2023, 2023).

Interest

1. Create an engaging content strategy that showcases the app's features and benefits.
2. Share valuable and informative content through both the brand's social media channels and influencer collaborations.
3. Collaborate with influencers to create sponsored posts or stories that pique the interest of their followers.
4. Incorporate user-generated content, such as concert photos and videos, shared by both influencers and app users.
5. Encourage influencers to provide honest reviews and testimonials about the app to generate interest and credibility.
6. Utilize social proof from influencers to add credibility and increase interest among their followers.

Desire

1. Share testimonials and success stories from satisfied app users, including those who discovered the app through influencers.
2. Utilize quotes, images, or short videos from influencers that highlight positive experiences and benefits.
3. Showcase real-life examples of influencers using the app and expressing their desire for its features and benefits.
4. Collaborate with influencers to create content that emphasizes the emotional connection between the brand and the audience.
5. Encourage influencers to share user-generated content featuring their app experiences to increase desire and aspiration among their followers.

Action

1. Provide clear calls to action (CTAs) throughout social media posts, both from the brand and influencers.
2. Strategically place CTAs on the Facebook site, website, and local advertising, as well as within influencer content.
3. Encourage influencers to guide their followers towards taking the next step, such as downloading the app, purchasing tickets, or joining the Patronaat+ membership.
4. Ensure maximum visibility and accessibility for the CTAs, both in the brand's posts and influencer collaborations.
5. Collaborate with influencers to create engaging content that encourages their followers to interact and engage with the brand.

Retention

1. Actively engage with the audience by monitoring comments, messages, and mentions related to the app, including those on influencer posts.
2. Respond promptly to comments and messages, both from the brand's social media channels and influencer collaborations.
3. Offer exclusive rewards, discounts, and promotions to existing users, as well as incentives for influencers to continue promoting the app.
4. Foster a sense of community and customer satisfaction by encouraging conversations and interactions among users and influencers.
5. Collaborate with influencers to create content that encourages continued app usage, loyalty, and advocacy among their followers.

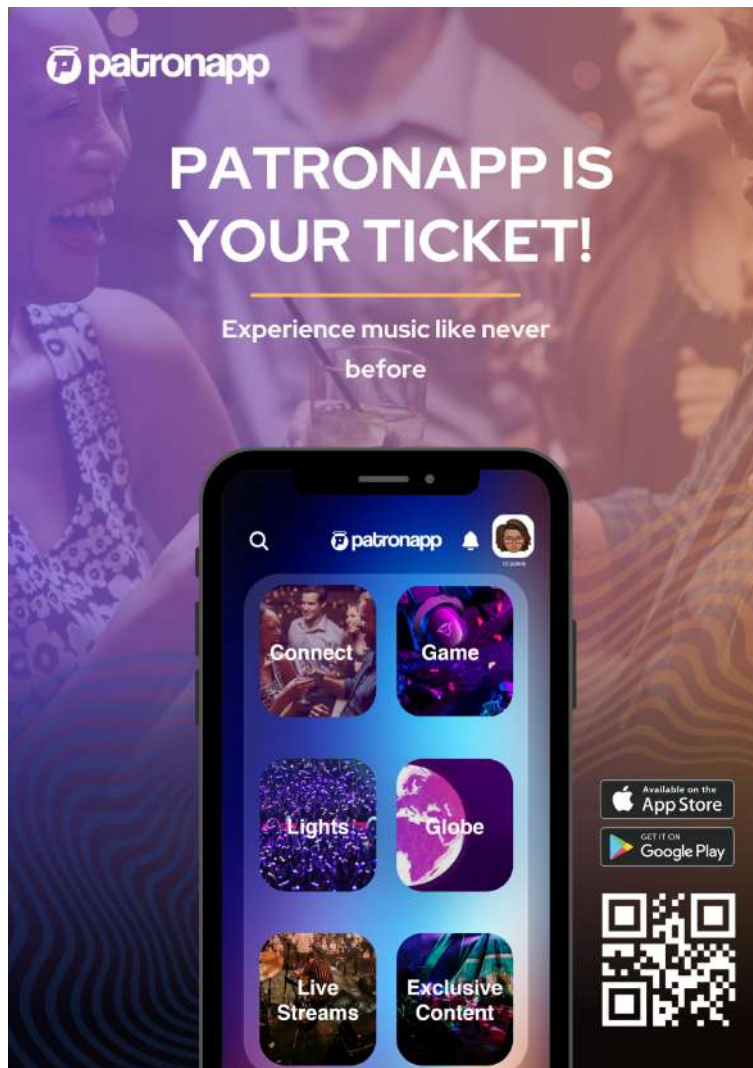

By incorporating influencer collaborations in the social media strategy, the marketing team can leverage the reach, credibility, and engagement of influencers to spread awareness, generate interest, create desire, drive action, and foster customer retention. Example local music influencers Patronaat could collaborate are:

- [@propaneofficial](#), Musician/Band (*Instagram*, n.d.-a).
- [@breakofdawnnl](#), DJ (*Instagram*, n.d.-b).
- [@sarahlauburger](#), Singer/Songwriter (*Instagram*, n.d.-c).
- [@alpaymusic](#), Music Producer & Dj (*Instagram*, n.d.-d).

Note: To have an overview for posting schedule and recommended posts check Appendix D.1. and Appendix F.

Visual Considerations

Poster:

Promo Videos:

https://drive.google.com/file/d/1ozDQ_w7SsCw-5eKBrQMxEDdj-J-5gLok/view?usp=sharing

<https://drive.google.com/file/d/1HNphelmBIDpTRnM4k5pRyanmiCzeb3Yf/view?usp=sharing>

Key Messages:

- Discover, connect, and personalize your music experiences with PatronApp.
- Access event information, ticket purchasing, social networking, and interactive features.
- Unlock exclusive content, behind-the-scenes footage, and live streams with Patronaat+ membership.

Marketing Schedule

Pre-launch: Prepare marketing materials, create content for owned and paid media, and establish partnerships with influencers and media outlets. (detailed content calendar)

Launch: Announce the PatronApp on the Patronaat website, distribute email marketing campaigns, start paid social media advertising, and launch the DOOH campaign.

Post-launch: Monitor performance, collect user feedback, adjust marketing tactics as needed, and continue promoting the app through earned media strategies. Find the schedule in Appendix D.

Legal Aspects

Three legal issues that online marketers should be aware of: data privacy, intellectual property rights, and advertising. It emphasizes the significance of staying compliant with relevant laws and regulations to avoid legal risks.

The key points:

1. Data Privacy:

- Internet companies often collect users' personal information through tracking technologies.
- Data privacy laws, such as the EU's GDPR, require obtaining consent from individuals before collecting their data.
- Marketers should have a privacy policy explaining data usage, provide control over data to consumers, and protect customer data stored on third-party servers.

2. Intellectual Property Rights:

- Intellectual property includes copyrights, patents, and trademarks that protect original works and creations.
- Copyright infringement occurs when someone copies or distributes protected works without permission.
- Trademarks help consumers distinguish products/services from different companies.
- Marketers should respect intellectual property rights, avoid plagiarism, and protect their own creations.

3. Advertising:

- Online marketers need to follow industry-specific rules and regulations when advertising products or services.
- The FTC enforces truth-in-advertising laws and requires disclosure of material connections to endorsed products/services.
- Paid endorsements from social media influencers are regulated.
- The CAN-SPAM Act regulates commercial email messages, requiring opt-out options and prohibiting deceptive practices.

- Compliance with spam laws, consent requirements, and email content regulations is necessary.

The information emphasises the responsibility of websites and online marketers to ensure legal compliance, including proper linking practices and research into applicable laws. It suggests seeking legal advice and assistance when necessary (IndustryTrends, 2022).

Licences - In general, developing an app typically does not require a specific license in the Netherlands. App development is considered a service provided by a business, and as long as you comply with the legal requirements for running a business, such as registering with the Netherlands Chamber of Commerce (KVK) and fulfilling tax obligations, it is possible to develop and distribute apps (Business.gov.nl, 2023).

Legal Requirements

To diligently produce PatronApp, Patronaat must adhere to specific legal requirements. As listed below, these laws range from General Data Protection Regulation (GDPR), Terms of Service, and Privacy Policy, to Intellectual Property Rights.

General Data Protection Regulation (GDPR)

PatronApp must comply with the GDPR, which is a regulation in the European Union (EU) that protects the personal data and privacy of EU citizens. The app should handle personal data lawfully and transparently, obtains consent for data processing, implements data security measures, and provides individuals with their rights, such as the right to access and delete their data (PrivacyPolicies, 2022).

Terms of Service and Privacy Policy

PatronApp should have clear and comprehensive terms of service and a privacy policy that outline how user data is collected, stored, and used. These documents should inform users about their rights and responsibilities when using the app (Storbaek, 2022).

Intellectual Property Rights

It is important to ensure that PatronApp does not infringe upon any intellectual property rights, such as copyrights or trademarks. Therefore, Patronaat should obtain proper licenses or permissions for any copyrighted content used within the app, such as music or images, source code, graphical user interface (GUI), movements and transitions, logos, fonts, and icons (Gubby, 2021).

As for the video content produced by Patronaat, some of the major laws include Consent and Release Forms, Copyright and Licensing, and Location Permits.

Consent and Release Forms

Patronaat needs to obtain written consent and release forms from all individuals who are interviewed or appear in the videos. These forms should grant permission to use their likeness, voice, and statements in the videos and any associated promotional materials (Canary, 2022).

Copyright and Licensing

Ensuring that the videos do not infringe upon any copyrights, trademarks, or other intellectual property rights is another thing to keep in mind when producing the videos. Patronaat should obtain proper licenses or permissions for any copyrighted material used in the videos, such as background music (Kaminsky, 2023).

Location Permits

Unless the videos are filmed at Patronaat, the venue needs to ensure that necessary permissions or permits are obtained for filming in those areas, especially if they are privately owned or require specific authorization (Schweighofer, 2021).

Sustainability Aspects

When developing PatronApp, Patronaat has to be aware of the sustainability considerations and the environmental impact. The reason why it's such a big issue is because nowadays, the mobile apps contribute to over 6% of global CO₂ emissions (Philippot, 2019). As a result, there are a few things that Patronaat should consider during that process.

First off all, they should choose wisely their server infrastructure and work with providers who prioritize renewable energy and have efficient data centers (Kasakliev et al., 2019). To make sure they minimize the energy overconsumption, they should consider using cloud services (that create a lot less CO₂ emissions) as those allow to use resources based on the demand. Moreover, to minimize the size of data storage and to optimize data transfer, they should make sure that the server provider can reduce the server load, bandwidth usage, and associated energy consumption (Kasakliev et al., 2019). They should also implement efficient compression techniques to avoid storing unnecessary user data especially since over 50% of apps continues to process data after application closes (Philippot, 2019). For instance, by backing up data in external servers which leads to draining phone battery quicker and reducing its total battery time.

Considerations that extend beyond app development process include striving to reducing e-waste by making sure that the app only has the necessary updates and one that is compatible with both newer and older versions of operating systems (Meyer, 2020). These days, apps' updates exclude older IOS or Android versions or are only compatible with the newest ones, either for performance or dependency reasons. However, this influences people to discard their phones prematurely and plays a role in the underutilisation and wastage of our smartphones thus contributing to high environmental impact (Meyer, 2021). This phenomena has a direct link between apps' maintenance and e-waste (premature discarding of phones) that Choi et al. (2018) have investigated. It suggests that those problem stem from both sides - phone manufacturers and app developers, which is why Patronat should take the precautions to avoid contributing to it.

Risk Analysis

Figure 6. *Impact grid assessing the risks of PatronApp*

	Impact				
Probability	Trivial	Minor	Moderate	Major	Extreme
Rare					
Unlikely			Can't find the right app developer	Not enough funds from Gemeente	
Moderate		Not enough interest among target group after the launch of the app		Incompatibility of external research with ZOOTS demo features	
Likely					
Very Likely					

Note. Figure made by the author.

First risk that PatronApp could be facing is not having enough interest from the target group after the launch of the app. Since most of Patronaat's visitors are locals, it's possible that at first, the information about the launch will mostly reach them and not internationals. To help with that, a more intense launch and marketing campaign would have to be organized. One, that would specifically target internationals and reach them.

Next, with a moderate probability is the fact that the findings of the company from Tilburg doesn't match the findings of ZOOTS thus may not fit the features that the team came up with. However, it's a chance to get a new perspective and come up with completely new features. Moreover, the team was prepared for such outcome which is why ZOOTS are ready to adjust current features or add new elements to make sure that their work can be used.

Another risk, which is rather unlikely, is the fact that Patronaat can't find an app developer that is right for them. It's not only in matters of budget or skills, but also of mentality and values, such as sustainability. The developer has to be chosen carefully, as they would probably handle updates in the future, so working with them on good terms is essential to the success of PatronApp.

Finally, second unlikely risk that Patronaat should be prepared for, is the fact that Haarlem Gemeente might not give them enough funds. For now, they only gave funds for research and there was no agreement regarding the budget for the development of the app, it's a possibility that after the research, the app might exceed the budget. That would leave Patronaat with two solutions - either adjust the number and complexity of the features so that the cost is lower, or to seek additional funds from other stakeholders who would be willing to cover the rest of the costs.

Appendix

Appendix A. Full description of all PatronApp features

The core features of the PatronApp are:

- **Real-time agenda updates:** Providing users the possibility of keeping track of the venue's agenda through real-time updates on events and performances. Receive notifications and reminders for upcoming events and performances.
- **In-app ticket booking:** Ticket booking directly through the app.
- **Account creation:** Personalized user profile: By creating an account users get a personalized profile where users can access all of their purchased tickets and view their event history. This can also be done through users connecting their Ticketmaster account for faster registration in the app.
- **Avatar Customization:** Users can create and customize their avatars.

To provide users with unique incentives to download and use the app, PatronApp will offer the following exclusive features:

- **Connect:** Build community through matching with other users based on shared interests and event preferences. With this feature, users can chat and make plans with each other, meet new people interested in the same type of events, build groups and ultimately expand their social circles.
- **Games:** This feature provides an interactive and engaging way for visitors to enjoy their concert experience by completing various tasks or finding hidden items within the venue. Each task is accomplished by scanning a dedicated QR code within the app to mark it as complete, and users earn points for each task they complete. The player with the highest score at the end of the game wins a prize which could be in the form of discounts on tickets, a welcome drink, and discounts on specific merch items providing an incentive for users to participate and engage with the feature.
- **Personalized event recommendations:** Users can link their Spotify and Apple Music accounts, receiving tailored event recommendations based on their music preferences. By analyzing the artists and songs they frequently listen to, users can discover exciting events and performances that cater to their specific tastes.
- **Discounts:** Users can earn points through multiple ways to earn discounts. The points will be shown on the top of the homepage of the app next to the user's avatar. The ways to earn discounts can be through creating an account, creating an avatar, purchasing a ticket, participating in the games feature, and utilizing the various app features.
- **Immerse:** A collection of features that can be changed and updated by the venue over time. These features are designed to create an immersive and engaging concert experience for users. By providing a range of interactive features that allow users to engage with the venue and with other concert-goers, the Interact feature helps to create a sense of community and involvement. Users can use the Interact feature to enhance their concert experience and feel more connected to the event. The features can be customized and adapted to suit the venue's needs and the users' preferences. Examples of the Interact & Immerse features include:

- *Live streams of events:* Users can access live streams of events directly through the app. This feature is especially useful for people who cannot attend the concert in person but still want to experience the

excitement of the event. Users can Chromecast their favorite concerts to their TVs or directly watch on their phones.

- *Interactive venue lighting sync*: This feature is exclusive to certain shows, as decided by the venue. During these shows, users can sync their phone's screen with the lights at the venue, creating an interactive and immersive experience. This feature adds an extra layer of excitement and engagement for users.

- *"Where Are You From?" map feature*: This interactive feature allows users to showcase their nationality on an animated globe. Users can mark their location on the map and see where other users are from. This feature encourages community engagement and adds a fun and interactive element to the concert experience.

- **Patronaat+ multi-tier membership** with various exclusive benefits. The benefits are mentioned in the 5Ps section later on in the document.
- **Data management**: A dedicated control panel for users to manage and customize their data preferences, allowing them to control the type of data the app collects and stores about them.

Appendix B. "Behind the scenes" videos' script templates

Appendix B.1. Template #1 introduction to the crew

[dynamic montage of short clips showing one person's work, synced with music]

Longer clip, close-up of a crew member

On screen - name and their role

[second dynamic montage, the clips are a bit longer, still synced with music]

Appendix B.2. Template #2 explanation of the roles

Clip #1

Shows a certain task - continuous shot

Voiceover explaining what is done on the video

On screen - written what the task is, eg. setting up the lights

Clip #2, clip #3 etc. are done in the same manner, the amount depends on the lengths of the video

Appendix B.3. Template #2.2 explanation of the roles ("the day of")

The difference between this one and the previous one is that there's more shots and the voiceover is done afterwards, feels less unplanned and spontaneous

The shots are filmed handheld by the crew member and show more of their perspective on their role

Appendix B.4. Template #3 timelapse before vs. after

Steady shot, timelapse of a crew member doing their task

Voiceover - explaining what is happening, why is it important etc.

Transition to the "after" (not in timelapse anymore) showing off the results

Appendix C. Link to BTS videos

Video 1 - Patronaat meet the crew

<https://youtu.be/pmeoWr2G3TM>

Video 2 - Patronaat sound technician at work

<https://youtu.be/Rfz2hUqquY0>

Appendix D. Launching Timeline

[illegible]

[illegible]

[illegible]

[illegible]

Appendix D.1. Marketing schedule

Week	Tasks	Costs (€)
1	Pre-launch: Prepare marketing materials and content for owned and paid media. Research and establish partnerships with influencers and media outlets.	400
2	Pre-launch: Create engaging social media posts and visuals. Develop a content calendar.	-
3	Pre-launch: Finalize marketing materials and content. Coordinate with influencers and media outlets for promotional activities.	-
4	Pre-launch: Test the app and ensure it is ready for launch. Prepare email marketing campaigns.	-
5	Launch: Announce the PatronApp on the Patronaat website. Send out email marketing campaigns to existing customers.	-
6	Launch: Start paid social media advertising on Facebook and Instagram. Monitor ad performance and make adjustments as needed.	1,000

7	Launch: Launch the digital out-of-home (OOH) advertising campaign. Monitor the reach and engagement of the DOOH ads.	600
8	Post-launch: Collect user feedback and reviews. Adjust marketing tactics based on initial response.	-
9	Post-launch: Continue promoting the app through earned media strategies, such as influencer outreach and media relations.	-
10	Post-launch: Analyze social media metrics, such as impressions, reach, and engagement. Optimize ad campaigns for better performance.	-
11	Post-launch: Monitor website traffic from social media. Aim for 5,000 monthly visitors from ad campaigns.	-
12	Post-launch: Monitor social media engagement. Aim for 500 combined likes, shares, comments, and mentions of Patronaat's Facebook and Instagram posts.	-
13	Post-launch: Monitor app downloads and conversion rates. Aim for 5,000 app downloads and a 10% conversion rate.	-

14	Post-launch: Monitor app retention rate. Strive to maintain a 30% retention rate of PatronApp users becoming active members.	-
15	Post-launch: Monitor user reviews, ratings, and feedback for PatronApp. Identify areas for improvement and implement necessary updates.	-
16	Post-launch: Aim for a conversion rate of 5% from active app users to Patronaat+ membership signups, resulting in 25 signups.	-
17	Post-launch: Continue engaging with the audience on social media. Respond promptly to comments, messages, and mentions.	-
18	Post-launch: Organize contests or giveaways on social media to incentivize app downloads and engagement.	-
19	Post-launch: Share testimonials and success stories from satisfied users of the app. Highlight positive experiences and benefits.	-
20	Post-launch: Analyze social media metrics and website analytics to measure the success of the marketing campaign.	-

21	Post-launch: Adjust marketing tactics based on the performance and feedback received. Continue promoting the app through earned media.	-
22	Post-launch: Evaluate the overall marketing communication plan and make recommendations for future campaigns.	-

Appendix E. Media Forms

Promo video: Shot list

Video 1: Patronaat+ Live Stream Experience

1. Opening shot: Member sitting comfortably on a couch, holding a tablet or smartphone with a joyful expression.
2. Transition shot: Member taps on the Patronaat+ app on their device.
3. Live stream footage: Captivating live stream of a concert.
4. Dynamic shots: Various angles of the live stream, capture the energy and excitement.
5. Member dancing and clapping along to the music.
6. Close-up shot of the member engaging with the app's chat feature, sending messages and emojis.
7. Shots of other fans' messages and emojis appear on the screen.
8. Closing shot: Member fully enjoying the concert, radiating happiness and satisfaction.

Video 2: PatronApp - Your Ultimate Music Companion

1. Opening shot: Vibrant animation of the PatronApp logo.
2. Transition shot: Animation transforms into the PatronApp interface on a smartphone.
3. Highlights of app features: Event recommendations, social connections, and personalized playlists.
4. Member seamlessly navigating the app and scrolling through upcoming events.
5. Member connecting with other music enthusiasts through the app's social feature.
6. Notification pop-up on the member's screen about an upcoming concert.
7. A person effortlessly adds the concert to their calendar.
8. App's personalized recommendations appear on the screen based on the member's preferences.
9. A person creating a playlist and starting to play their favourite songs.
10. Close-up shot of the member captivated by the immersive music experience.
11. Closing shot: Member happily exploring the app's features and the PatronApp logo.

Promo video: SCRIPT

Video 1: Patronaat+ Live Stream Experience

[Scene: A member sits comfortably on a couch, holding a tablet or smartphone with a joyful expression.]

Voiceover: "Missing out on concerts? Craving that live music experience?"

[The member taps on their device, launching the Patronaat+ app, and the screen transitions to a captivating concert live stream.]

Voiceover: "Introducing Patronaat+ - your exclusive pass to live streams and virtual concerts."

[Cut to dynamic shots of the live stream, capturing the atmosphere. The member is seen dancing, fully immersed in the music.]

Voiceover: "Stay in the front row, wherever you are."

[The member engages with the live stream, chatting with other fans and expressing their excitement through messages and emojis.]

Voiceover: "Connect with fellow music lovers and share the thrill together."

[The video concludes with the member thoroughly enjoying the concert, with happiness and satisfaction.]

Voiceover: "Start your free trial now and be part of the live music revolution. Patronaat+ - Where music comes alive. #PatronaatPlus #LiveMusicAtHome"

Video 2: PatronApp - Your Ultimate Music Companion

[Scene: A vibrant animation of the PatronApp logo captures attention.]

Voiceover: "Tired of missing out on your favorite concerts? Longing for a richer music experience?"

[The animation transforms into the PatronApp interface on a smartphone, showcasing its standout features like event recommendations, social connections, and personalized playlists.]

Voiceover: "Meet PatronApp - your ultimate music companion, always at your side."

[The video displays the member seamlessly navigating the app, discovering upcoming events, and connecting with fellow music enthusiasts.]

Voiceover: "Discover a world of music, stay in the know, and forge connections with like-minded fans."

[The member receives a notification about an upcoming concert and effortlessly adds it to their calendar.]

Voiceover: "Never miss a beat with timely event reminders. Your favorite artists, just a tap away."

[The video demonstrates the app's ability to curate personalized recommendations based on the member's musical preferences.]

Voiceover: "Unleash the magic of music discovery with tailor-made suggestions crafted exclusively for you."

[The member creates a playlist and starts playing their favorite songs, visibly captivated by the immersive experience.]

Voiceover: "Download PatronApp now and unlock your musical journey. Discover, connect, and groove to the rhythm of life. #PatronApp #MusicCompanion"

Appendix F. Visual Presentation
