Preface

About The Team & Project

Omar Abdulghani and Niklas Forget, fourth-year Creative Business students at InHolland University of Applied Sciences in Haarlem, collaboratively worked on the Managing of Value Creation and Marketing UoS2 project for their client, Amstelhof. This report encapsulates their efforts to design and strategize the implementation of "Amstelhof Connect," a staff-focused application aimed at addressing operational inefficiencies and enhancing personalized member engagement.

Together, Omar and Niklas conducted extensive research, including internal and external analyses, stakeholder interviews, and usability testing, to ensure the app aligns with Amstelhof's organizational goals and values. They also collaborated on creating the Figma prototype of the app, ensuring its design reflected both user needs and strategic objectives. Each contributed to the solution-building process, resulting in a unified vision for addressing the identified challenges. This document represents their collective findings, strategies, and innovative solutions.

"Amstelhof Sport & Health Club in De Kwakel aims to be a five-star facility that offers a revolutionary combination of sports and relaxation through a unique formula.

The club focuses on delivering a customer-oriented experience, emphasizing high-quality equipment and a wide range of activities.

Members are meant to experience a genuine club atmosphere with a five-star feeling.

This quality assurance is achieved through the professionalism and

customer-oriented attitude of all staff, emphasizing sincerity and genuine interest in guests." (Amstelhof, personal communication, 2024).

1. Introduction

1.1 Purpose of the Strategic Marketing Plan

The purpose of this strategic marketing plan is to detail the iterative development and strategic implementation of "Amstelhof Connect," a sophisticated application designed to optimize internal staff operations at Amstelhof. This app addresses critical inefficiencies in staff collaboration, task management, and member engagement while reinforcing Amstelhof's commitment to providing a superior service experience. By using a user-centered approach and iterative design methodology, this plan highlights how the app aligns with organizational objectives and facilitates value creation.

1.2 Origin of the Concept

On October 9, 2024, the project team presented Amstelhof with three innovative concepts aimed at addressing organizational challenges:

- Concept 1: Application for Measuring Customer Satisfaction
 - This concept proposed a tool to systematically capture and analyze customer satisfaction metrics through automated survey distribution and data collection.
- Concept 2: Survey Feedback Structuring and Processing System
 - This concept emphasized creating a structured platform to categorize and organize member feedback, enabling actionable insights for service enhancement.
- Concept 3: Amstelhof Connect for Staff
 - This concept introduced a comprehensive internal application tailored to streamline staff operations, enhance team communication, and facilitate personalized member interactions.

Following a pitch presentation by us on the 9th of October to Amstelhof, the third concept, Amstelhof Connect for Staff, was selected. This decision was based on the app's capacity to address pressing organizational needs, including operational inefficiencies and gaps in personalized member engagement. The concept further resonated with Amstelhof's strategic vision of building a collaborative and high-performing workplace.

1.3 Iterative Approach and Research Framework

The development of Amstelhof Connect adopts an iterative design methodology grounded in user research and feedback integration. This approach includes three main phases:

1. Research Phase:

- Comprehensive data collection through interviews, surveys, focus groups, and usability testing to identify user pain points and operational challenges.

2. Development and Iteration Phase:

- Implementation of findings from the research phase into progressive app iterations, ensuring continuous refinement of features and functionality.

3. Evaluation and Feedback Integration Phase:

- Systematic evaluation of each app iteration through thorough usability testing, followed by the incorporation of actionable feedback to optimize the app's performance.

This structured approach ensures that the final product is both functionally robust and aligned with the needs of its primary users—Amstelhof's staff. By centering the app's development around practical insights and iterative refinements, this strategic marketing plan not only shows the development journey but also demonstrates the app's potential to deliver measurable organizational benefits.

1.4 Alignment of Values Between the Team and Amstelhof

Our team's personality and values align closely with Amstelhof's commitment to personal attention and client care. Empathy, insight, and a desire to make a meaningful impact are central to our approach. These traits resonate with Amstelhof's focus on fostering deep, personalized connections to enhance client well-being and satisfaction.

Team

Amstelhof
SPORT, HEALTH & WELLNESS

Key Shared Values

Empathy and Personal Attention

Amstelhof prioritizes personal relationships with their clients, ensuring that every member feels valued. Similarly, we place empathy at the core of our work, striving to understand user needs deeply and deliver solutions that exceed expectations. Empathy fosters meaningful customer relationships, improves user satisfaction, and increases loyalty (Norman, 2016).

Health and Fitness Commitment

Both Amstelhof and our team share a passion for health and wellness. This shared interest drives our motivation to create tools that promote member engagement and contribute to their fitness journeys. Research highlights that fitness initiatives embedded within organizations lead to increased customer retention and satisfaction (Hoffman, Kang, & McCarthy, 2020).

Support and Motivation

We value Amstelhof's supportive environment, which aligns with our belief in creating systems that inspire and motivate users. Whether through personalized communication or recognition of achievements, this shared commitment enhances loyalty and satisfaction. Supportive environments have been shown to foster greater engagement and improve user outcomes (Hamari, Koivisto, & Sarsa, 2016).

Continuous Improvement

Amstelhof's dedication to regular feedback and data-driven enhancements mirrors our own belief in constant learning and iteration. This alignment has informed the iterative design process of the staff app, ensuring it evolves to meet user needs effectively. Incorporating continuous feedback loops is essential for organizations striving to meet evolving customer expectations (Lemon & Verhoef, 2016).

Professional and Personalized Guidance

While we appreciate the value of independent research, we also acknowledge the importance of professional input. Amstelhof's coaching programs and personalized fitness plans align with our principle of combining human expertise with innovative technology. Personalization enhances trust and ensures solutions cater to individual needs (Tuten, 2021).

This alignment of values reinforces the strategic importance of developing customer-centric solutions, ensuring that the app enhances Amstelhof's reputation for delivering exceptional service while reflecting our dedication to making a meaningful impact.

2. Research and Testing Insights

2.1 Summary of the Four Experiments

To ensure that "Amstelhof Connect" meets the needs of staff and aligns with Amstelhof's operational goals, four experiments were conducted:

Interviews

Objective: To identify specific challenges faced by staff and gather initial insights into their needs.

Methodology: Semi-structured interviews were conducted with Amstelhof staff members, focusing on communication, task management, and member engagement.

Key Findings: Staff highlighted difficulties with existing tools, such as fragmented systems and poor communication channels, which hindered efficiency.

Survey Analysis

Objective: To quantify feedback and identify trends in staff preferences and member engagement practices.

Methodology: A digital survey was distributed to both staff and members, including Likert-scale and open-ended questions.

Key Findings: around 500 people responded. 64% of respondents preferred personal connection, and 70% believed personalized engagement improves member retention. Staff emphasized the importance of an intuitive interface.

Focus Group

Objective: To co-create a user-driven prototype with staff input.

Methodology: The staff members discussed pain points and sketched ideas for the app's functionality and design.

Key Findings: Participants proposed features such as a task management system, a member tracking dashboard, and feedback integration tools. This iterative activity reinforced the importance of personalization and usability (Lemon & Verhoef, 2016).

Usability Testing

Objective: To evaluate the functionality and user experience of initial prototypes.

Methodology: Staff interacted with the prototypes and looked at tasks such as scheduling, reporting, and communication, while usability metrics were tracked.

Key Findings: The prototypes revealed areas for improvement, such as navigation flow and feature visibility. Iterative refinements addressed these gaps (Allen & Green, 2021).

2.2 Importance of User Feedback in Iterative Development

User feedback is the cornerstone of iterative design, ensuring that each development cycle enhances usability and functionality. This approach:

Enhances Usability:

- Feedback collected through usability testing and surveys highlighted specific pain points, enabling targeted refinements to improve the app's interface and functionality (Garcia & Weaver, 2021).

Aligns with User Needs:

- Involving staff in focus groups and interviews ensured that the app's features addressed real-world challenges, increasing its adoption likelihood (Bailey et al., 2018).

Drives Innovation:

- Co-creation during focus groups allowed staff to suggest innovative features, ensuring the app was practical and aligned with organizational goals.

Builds Engagement:

- Continuous involvement of staff created a sense of ownership, fostering a positive attitude towards the app's implementation (Parsons et al., 2019).

By integrating user feedback at every stage, the iterative process not only improved the app's design but also strengthened its relevance to Amstelhof's operational needs and values.

3. Experiment Details and Findings

3.1 Experiment 1: Interview Questions

Conducting interviews is a critical qualitative research method that allows for in-depth exploration of user needs, motivations, and pain points (Silverman, 2020). This method is particularly effective in uncovering nuanced challenges that quantitative methods might overlook, providing a rich foundation for user-centered design.

3.1.1 Objectives and Methodology

The objective of the interviews was to identify the challenges faced by Amstelhof staff in their daily operations and gather insights on their needs for enhancing member engagement and service efficiency. Semi-structured interviews were conducted with staff to explore their experiences with current systems, workflows, and member interaction processes. Key topics included task management, system usability, and communication gaps.

3.1.2 Key Insights and Implications

- **Insights:**

- Staff expressed frustration with using multiple fragmented systems, leading to inefficiencies.
- Personalized communication with members was seen as critical but was hindered by current system limitations.
- There was a desire for tools to track member engagement and satisfaction proactively.

- **Implications:**

- Development of a centralized platform is essential to streamline workflows.
- Features like automated notifications and tools for personalized interactions should be prioritized.
- Enhanced tracking and reporting mechanisms for member satisfaction are needed.

3.2 Experiment 2: Survey Analysis

Surveys are a valuable tool for gathering large-scale, structured data from target populations. They allow researchers to identify patterns, preferences, and trends efficiently, making them ideal for validating hypotheses and guiding feature prioritization (Bird, 2021). This method complements qualitative insights by adding measurable data points to support decision-making.

3.2.1 Design and Distribution

A digital survey was distributed exclusively to Amstelhof members on November 11, 2024 to gather quantitative and qualitative data about their preferences and experiences with personal connection and gym engagement. We used Google Forms to make the survey. The survey included questions on feature preferences, operational challenges, and user experiences.

Respondents provided input on their expectations and priorities for the proposed staff app (Visuals 1 & 2).

Visual 1 Amstelhof Survey Insights (Amstelhof, 2024)

Visual 2 Amstelhof Survey Insights (Amstelhof, 2024)

Key Trends:

- Members emphasized the importance of tools that improve personalization and operational efficiency, highlighting their desire for a more tailored and engaging experience.
- Clear demand emerged for features that centralize data and enhance the user experience, particularly in areas related to personalized interactions and feedback management.

3.3 Experiment 3: Focus Group with User-Driven Prototype

Focus groups provide a collaborative environment where participants can share ideas and co-create solutions. This method is particularly effective for understanding group dynamics and generating innovative ideas, as it fosters interaction and debate (Morgan & Hoffman, 2018). By engaging users directly in the design process, focus groups ensure that solutions are practical and relevant.

Visual 3 User-Driven Prototype (Amstelhof, 2024)

3.3.1 Goals and Process

The focus group aimed to co-design a user-driven prototype that directly addressed staff needs. Participants were provided with tools to sketch their ideal app features and workflows. They then discussed and refined these ideas collaboratively, with a focus on functionality and usability.

3.3.2 Participant Feedback and Prototype Insights

• Feedback:

- Participants highlighted the need for a task management dashboard and clear ownership of tasks.
- Features such as "Member Highlights" for recognizing member milestones and achievements were suggested.
- Improved integration of feedback systems to better track and address member satisfaction was requested.

• Prototype Insights:

- Feedback informed the design of the "Member Interaction & Follow-Up Center" and "Staff Coordination & Task Management" modules.
- Usability and intuitive navigation were identified as critical factors for app success.

3.4 Experiment 4: Usability Test

Usability testing is essential for evaluating how effectively users interact with a product. It identifies friction points, inefficiencies, and design flaws, providing actionable feedback for improvement (Albert & Tullis, 2022). This iterative approach ensures that the final product aligns with user expectations and delivers a seamless experience.

3.4.1 Testing Criteria and Process

Usability testing was conducted on the initial prototype to evaluate its functionality and user experience. Staff were asked to complete specific tasks, such as scheduling, sending notifications, and accessing feedback data. Metrics recorded included task completion time, user errors, and overall satisfaction.

3.4.2 Usability Issues and Recommendations

- **Findings:**

- The usability test revealed no major issues, and the app effectively addressed staff needs as intended.
- One staff member noted that the interface was "too colorful," prompting the team to consider additional customization options.

- **Recommendations:**

- Implement a theme customization toggle in the app prototype to allow staff to personalize the interface according to their preferences.
- Continue monitoring for feedback during subsequent testing phases to ensure broader user satisfaction.

- **Recommendations:**

- Simplify navigation and introduce visual cues for key features.
- Streamline the task management interface to enhance usability.

4. Iterations and Prototype Enhancements

4.1 Overview of Iterative Improvements

The development of the Amstelhof Staff App followed an iterative process, informed by feedback and insights gathered from experiments conducted with both staff and members. Each iteration was designed to address specific challenges and improve functionality based on real-world needs. By using a user-centered approach, the app evolved to meet the objectives of fostering personalization, improving workflow efficiency, and enhancing member and staff engagement.

4.2 Changes Implemented After Each Experiment

4.2.1 First Iteration: Email Center, Happiness Index, and Feedback Feed Widgets

Visual 4 First Iteration (Created by Omar and Niklas, 2024)

The first iteration of the Amstelhof Staff App addressed key feedback and insights gathered from interview questions with Amstelhof's staff conducted during the first experiment on 12th November 2024 **(Check Appendix [2] for a recording of the interview)** These interviews highlighted the need for tools that streamline communication, track member satisfaction, and manage feedback effectively (Nijssen & Frambach, 2010; Tuten, 2021).

- **Email Center Widget**

- What's New: The Email Center Widget provides a quick overview of members categorized by membership duration, color-coded as follows:
 - **Green:** New members
 - **Pink:** Members for 5 months
 - **Light Pink:** Members older than 12 months
- Interactive Feature: A "Open Email Center" button allows staff to access a detailed email management system for targeting specific member groups.

- **Happiness Index Meter Widget**

- What's New: A visual dashboard that aggregates overall member satisfaction using a color-coded scale:
 - **Green:** Positive feedback
 - **Orange:** Moderate feedback
 - **Yellow:** Suggestions
 - **Red:** Negative feedback
- Data Source: Feedback is drawn from:
 - Social media platforms (e.g., Google Reviews, Facebook)
 - Surveys conducted by Amstelhof
 - Feedback collected via kiosks/screens at the center
- Interactive Feature: A "Learn More" button enables staff to view detailed reports and insights.

- **Feedback Feed Widget**

- What's New: This widget consolidates feedback from all sources into a central feed with a color-coded system for easy analysis:
 - **Green:** Positive feedback
 - **Orange:** Suggestions for improvement
 - **Yellow:** Member ideas
 - **Red:** Attention-needed feedback
- Interactive Feature: A "View All" button provides access to the full list of feedback for further review.

The decisions for this iteration were grounded in findings from the first test (interviews conducted on November 12, 2024), which highlighted three critical needs: improved communication with members, centralized feedback management, and actionable insights into member satisfaction (Nijssen & Frambach, 2010; Tuten, 2021).

- **Communication Improvements**

- The Email Center Widget was implemented to address staff concerns about the inefficiency of existing communication tools. Staff emphasized the importance of targeted communication to engage different member segments effectively. This aligns with prior research showing that segmentation and personalization in communication enhance member retention (Tuten, 2021).

- **Feedback Management**

- Staff reported that feedback from multiple sources was scattered and difficult to act upon. The addition of the Happiness Index Meter and Feedback Feed Widget consolidates this data into a single platform. By providing a clear overview of feedback, staff can prioritize issues and recognize areas for improvement, aligning with best practices in customer satisfaction (Nijssen & Frambach, 2010).

- **Actionable Insights for Member Retention**

- The integration of color-coded systems in both the Happiness Index Meter and Feedback Feed Widget enables staff to quickly identify and act on trends. This decision reflects feedback from interviews indicating the need for tools that simplify the process of analyzing member satisfaction data. Studies confirm that visual dashboards can enhance decision-making efficiency (Osterwalder & Pigneur, 2014).

4.2.2 Second Iteration: Enhanced Email Center with AI Features

Visual 5 Second Iteration (Created by Omar and Niklas, 2024)

In the second iteration, the Email Center feature was enhanced with AI-powered email assistance tools. These tools aim to provide personalized communication suggestions, making it easier for staff to maintain meaningful connections with members. This iteration incorporates member filtering options, AI-generated email recommendations, and preset templates for common communication scenarios, such as birthdays or personalized workout suggestions.

AI-Powered Email Suggestions

The system provides smart suggestions for email subjects and content based on member data, such as:

- Member activity patterns (e.g., attendance consistency, class participation)
- Fitness goals and past interactions
- Staff can select from multiple email categories like Personalized Recommendations, Birthdays, or Other Communication, streamlining the process of crafting targeted messages.

Member Segmentation and Filtering

- Staff can filter members based on specific criteria such as membership duration, engagement level, or recent activities.
- A member list displays filtered results, with a visual status indicator (e.g., green dots for members currently at the gym).

Quick Access Templates

- Preloaded email templates, such as birthday greetings or workout suggestions, can be quickly customized by staff.
- These templates ensure consistency in tone and professionalism while saving time.

Personalized Recommendations

Based on member preferences and gym usage data, AI generates workout, facility, or class recommendations. For example, if a member frequently attends cardio classes, the system might suggest strength training or yoga for balance.

The enhancements made in this iteration were primarily informed by findings from the **survey conducted** and the **focus group held on November 12, 2024 (Check Appendix [6 & 7]** for survey results, and focus group insights) . Both experiments revealed a need for more efficient and personalized communication tools for staff to connect with members.

• Survey Findings

The survey results indicated that 58% of members felt more valued when they received personalized communication regarding their fitness journey. However, staff expressed difficulty in manually crafting individualized messages for a large member base. This data justified the integration of AI-powered email suggestions to streamline personalization while maintaining a human touch (Tuten, 2021).

- Members also highlighted that they were more likely to act on recommendations when they felt tailored to their preferences. The Personalized Recommendations feature directly addresses this need by using AI to suggest classes or activities based on member behavior.
- **Focus Group Insights**
 - During the focus group with Amstelhof staff, participants expressed frustration with the lack of tools to easily segment members or track engagement. Staff reported spending excessive time sifting through member lists to send targeted communication.
 - Based on this feedback, the Member Segmentation and Filtering options were added, allowing staff to quickly filter members by criteria such as new joiners, frequent attendees, or inactive members. This addition aligns with research emphasizing the importance of segmentation in effective customer engagement (Osterwalder & Pigneur, 2014).
- **Improved Workflow Efficiency**
 - Staff in the focus group suggested the need for preloaded templates to reduce repetitive tasks. The inclusion of templates, combined with AI suggestions, not only improves workflow efficiency but also ensures professional and consistent messaging.
 - These improvements address staff feedback that their primary focus should be on in-person interactions rather than administrative tasks. By automating email suggestions and templates, the system reduces the burden on staff while maintaining high-quality communication.

4.2.3 Third Iteration: Member Interaction & Follow-Up Center (People-Centric Approach)

The third iteration focuses on the introduction of the Member Interaction & Follow-Up Center, which is designed to enhance Amstelhof's personal connection with its members. This iteration provides tools for staff to monitor engagement, log interactions, and maintain a proactive approach to member support. The features prioritize Amstelhof's core value of fostering meaningful relationships while ensuring members feel recognized and motivated.

- **Motivation Levels**
 - What's New: A Motivation Level Indicator for each member, displayed in a percentage:
 - 67%+: High motivation, consistent gym visits and class participation.
 - 34% to 66%: Moderate motivation, irregular attendance.
 - 0% to 33%: Low motivation, limited gym activity or no engagement.
 - Data Sources: Motivation levels are determined based on:
 - Weekly and monthly gym visit data.
 - Class bookings and attendance records.
 - Participation in events or personal training sessions.

Visual 6 Third Iteration (Created by Omar and Niklas, 2024)

• **Interaction Log and Follow-Up Prompts**

- What's New: A Feedback & Well-Being Tracker allows coaches to log interactions with members and provides automated prompts for follow-ups based on recorded data. For example:
- A member hasn't visited the gym in two weeks → Notify staff to send a motivational message.
- Notes from prior discussions (e.g., personal fitness goals) prompt personalized check-ins.
- This system ensures members receive consistent and proactive attention, strengthening their connection to Amstelhof.

- **Points & Rewards Program**

- What's New: A gamified Points System encourages member participation and loyalty:
- Points are awarded for attending classes, booking personal training sessions, or using gym equipment consistently.
- Rewards include discounts on services, free classes, or merchandise.
- The app visually tracks progress toward rewards milestones, boosting engagement.

This iteration was informed by insights gathered during the focus group on November 12, 2024, and the survey conducted throughout November - December, 2024:

Survey Findings

- Members expressed a strong preference for personalized attention:
- 68% stated that recognition of their gym activities motivated them to remain consistent.
- 59% indicated that earning rewards would increase their participation, highlighting the need for gamified elements (Werbach & Hunter, 2020).

Focus Group Insights

- Staff emphasized that tracking member engagement was difficult with the current system, often resulting in missed opportunities for personalized support. The Motivation Levels feature and Feedback Tracker directly address this gap, providing clear data to guide staff interactions.
- Staff also identified gamification as a potential motivator for increasing member participation, reinforcing its inclusion in this iteration (Hamari et al., 2016).

Strategic Relevance

- The points system and personalized follow-ups align with customer experience trends that emphasize proactive and tailored engagement to retain customers (Lemon & Verhoef, 2016).
- Motivation tracking integrates well with Amstelhof's emphasis on creating a supportive and inclusive environment for members, ensuring they feel valued and connected.

4.2.4 Fourth Iteration: Staff Coordination & Task Management (Staff Center)

The fourth iteration introduces the **Staff Center**, a feature designed to enhance collaboration, task management, and communication among Amstelhof's staff. This iteration addresses the challenges and ideas brought forward during the **focus group held on November 12, 2024**, where staff actively participated in **user-driven prototype sketches**, sharing their vision for a more collaborative and organized work environment.

Visual 7 Fourth Iteration (Created by Omar and Niklas, 2024)

1. **Colleague Center**

- **What's New:** A dedicated space for staff collaboration, which includes:
 - A **Weekly Schedule Overview** to see which colleagues are working on any given day.
 - A **Messaging Feature** for in-app communication between staff members, reducing reliance on external tools.
 - A **Whiteboard Feature** where team members can post ideas, and share updates.

2. **Task Management Features**

- **What's New:** A **To-Do List** feature for assigning, tracking, and prioritizing tasks:
 - Tasks can be delegated to specific staff members, with clear ownership and deadlines.
 - A progress tracker displays task status, ensuring accountability and visibility.
- This tool simplifies task allocation, ensuring that staff know exactly who is responsible for what.

3. **Scheduling Tool**

- **What's New:** A **Schedule Management Tool** that provides:
 - A visual calendar showing all staff shifts for the week, enhancing transparency.
 - Functionality for team members to update availability or request shift swaps (pending manager approval).
 - Notifications for upcoming shifts or last-minute changes.

4. **Permissions Management**

- **What's New:** A permissions feature that allows customization of access based on staff roles:
 - Managers can assign tasks, update schedules, and view team KPIs.
 - Coaches can log member interactions, view tasks assigned to them, and communicate with colleagues.

This iteration is directly inspired by the **focus group held on November 12, 2024**, where Amstelhof staff created **user-driven prototype sketches** to visualize the features they wanted in a collaborative tool. Staff emphasized the need for better communication, task clarity, and a shared platform for ideas and schedules.

• **Focus Group Insights**

- Staff sketches highlighted the importance of:
 - **Viewing colleague schedules** to improve daily coordination and understand team availability.
 - **Delegating tasks efficiently** through a simplified interface, akin to project management tools like Asana but tailored for a gym setting.
 - **Sharing ideas on a collaborative whiteboard**, fostering teamwork and innovation.
- These ideas formed the foundation for the **Colleague Center**, **To-Do List**, and **Note Sharing Feature** (Martin et al., 2020).

- **User-Centered Design Approach**

- By involving staff in creating the prototype sketches, the features reflect their real-world needs and workflows, ensuring practical usability (Lemon & Verhoef, 2016).
- Including features like a messaging system and scheduling tool directly addresses the challenges staff face in coordinating their daily tasks, as highlighted in the focus group.

- **Strategic Importance**

- Effective task management and communication tools enhance team efficiency, reduce errors, and improve overall staff satisfaction. Research supports that collaborative tools can increase productivity by up to 20% in service industries (Allen & Smith, 2021).

- **Alignment with Amstelhof's Values**

- The **Staff Center** supports Amstelhof's mission to empower its team, ensuring that staff feel equipped to deliver exceptional service. By prioritizing teamwork and organization, this iteration helps maintain high standards of service quality.

4.3 Finalized Prototype Features and Functions

The finalized prototype incorporates features from all iterations, ensuring a comprehensive solution to the challenges identified:

- Centralized communication tools like the Email Center with AI capabilities.
- Member satisfaction tracking through the Happiness Index Meter and Feedback Feed.
- Personalized engagement tools like the Motivation Levels Indicator and Points & Rewards Program.
- Staff coordination features, including task management and schedule visibility.
- Customization options, such as a theme toggle, to enhance usability and satisfaction.

The iterative development process ensured that the app met the needs of both staff and members, aligning with Amstelhof's values of fostering personal connections and providing high-quality service.

5. Strategic Summary

5.1 Value Creation Objectives for the Amstelhof Staff App

The Amstelhof Staff App was designed to address key operational and engagement challenges identified during the research and testing phases. The app's primary value creation objectives include:

- **Enhancing Member Experience:** By automating and personalizing member interactions, the app fosters deeper connections and ensures members feel valued and recognized. Features such as the Happiness Index Meter and Feedback Feed enable staff to respond proactively to member needs, improving satisfaction and loyalty.
- **Streamlining Staff Operations:** The app integrates multiple tools into a unified platform, reducing the inefficiencies caused by fragmented systems. Features like the Task Management Tool and Colleague Center enhance staff productivity and collaboration, allowing more time to focus on delivering high-quality service.
- **Boosting Member Engagement and Retention:** The inclusion of gamified elements such as the Points & Rewards Program motivates members to participate in activities and remain consistent in their gym attendance. Personalized communication through the Enhanced Email Center further strengthens member loyalty and eases communications.
- **Leveraging Data-Driven Insights:** The app's analytical features, including the Happiness Index Meter and Feedback Tracker, provide actionable insights that guide staff decision-making. These tools empower Amstelhof to continuously refine its services based on real-time feedback and trends.

The Amstelhof Connect app delivers measurable value for various stakeholders by addressing specific needs and aligning with organizational objectives:

- For Staff:
 - Efficiency: The app centralizes tools such as task management, communication, and member engagement into a single platform, reducing administrative workloads by an estimated 30%. This allows staff to focus more on personalized interactions, increasing job satisfaction and efficiency (Davenport & Harris, 2017).
 - Motivation Tracking: By automating follow-ups and providing actionable insights, the app helps staff maintain member motivation, leading to improved coaching outcomes and reduced manual tracking efforts.
- For Management:
 - Data-Driven Decisions: Features like the Happiness Index and Engagement Insights enable management to analyze trends, address problem areas proactively, and track performance metrics to meet organizational goals. These insights can lead to higher retention rates and operational improvements (Lemon & Verhoef, 2016).

- **Team Productivity:** The streamlined task allocation and scheduling features improve team collaboration and productivity, saving an estimated 20% of time spent on coordination (Martin et al., 2020).
- **For Members:**
 - **Personalized Engagement:** Features like Motivation Levels and Points & Rewards Programs enhance member satisfaction by recognizing individual achievements and providing tailored recommendations. Personalized interactions have been shown to increase customer retention by up to 15% (Werbach & Hunter, 2020).
 - **Improved Experience:** Members benefit from a more supportive and engaging environment as staff are better equipped to address their needs and recognize milestones, fostering loyalty and a sense of belonging.

5.2 Alignment with Marketing Strategy

The development and implementation of the Amstelhof Staff App align seamlessly with Amstelhof's marketing strategy, which prioritizes personalized service, community building, and operational excellence. Key alignments include:

- **Personalized Communication as a Competitive Edge:**
 - The app's AI-powered email suggestions and segmentation features align with Amstelhof's commitment to personalized service. By tailoring interactions to individual member preferences, Amstelhof differentiates itself from competitors and enhances its value proposition.
- **Promoting Member-Centric Values:**
 - Amstelhof's brand emphasizes inclusivity and customer care. Features like the Motivation Levels Indicator and Member Interaction Tracker reinforce these values, ensuring that members feel seen and supported throughout their fitness journey.
- **Driving Engagement through Innovative Features:**
 - The gamification elements, such as the Points & Rewards Program, not only align with current trends in fitness engagement but also support Amstelhof's goal of fostering a vibrant, active community. These features encourage participation and create a sense of achievement among members.
- **Strengthening Internal Marketing Efforts:**
 - The app improves internal communication and task coordination, which are essential for delivering consistent and high-quality service. By streamlining staff operations, Amstelhof can maintain its reputation for excellence and reliability.
- **Data-Driven Marketing Enhancements:**
 - The app's data collection and analytics capabilities support Amstelhof's broader marketing strategy by providing insights into member behavior and preferences. These insights enable targeted campaigns and service improvements that align with member needs.

Through these strategic alignments, the Amstelhof Staff App not only addresses immediate operational challenges but also reinforces Amstelhof's long-term vision of being a leader in personalized fitness experiences.

6. Internal Marketing and Adoption Strategy

6.1 Positioning the App Internally

The Amstelhof Staff App has been positioned as a transformative tool designed to enhance staff efficiency and improve member engagement. By addressing the operational challenges identified during the research phase, the app aligns with Amstelhof's mission of fostering personal connections and delivering high-quality service. The app's internal positioning focuses on the following:

- **As a Productivity Booster:**
 - The app consolidates fragmented tools into a single platform, reducing inefficiencies and streamlining daily operations. Research indicates that integrated systems improve productivity and reduce errors by centralizing data and processes (Davenport & Harris, 2017).
 - Features like the Task Management Tool and Colleague Center emphasize teamwork and accountability, enabling smoother coordination. Effective task management systems have been shown to enhance collaboration and ensure task clarity, which improves team efficiency (Martin et al., 2020).
- **As a Member Engagement Enhancer:**
 - Personalized tools, such as the Happiness Index Meter and Feedback Tracker, empower staff to proactively address member needs, improving satisfaction and loyalty. Personalization in customer interactions has been linked to increased customer retention and engagement (Lemon & Verhoef, 2016).
- **As a Professional Development Tool:**
 - By providing insights into member behavior and feedback, the app equips staff with the knowledge needed to refine their interactions and enhance their professional skill sets. Access to actionable data enables staff to make informed decisions, ultimately enhancing service quality (Albert & Tullis, 2022).

Scalability

- **For Other Gyms:** The app's modular architecture allows it to be customized for different gym environments. Features such as task management, feedback integration, and member engagement tools can be easily adjusted to suit various organizational structures.
- **Market Expansion:** By incorporating multilingual support and region-specific compliance (e.g., GDPR in Europe, HIPAA in the U.S.), Amstelhof Connect could cater to international fitness markets.

Dynamic Adaptation

- **Emerging Technologies:** The app is designed to integrate with future technological advancements, such as enhanced AI algorithms or wearable device tracking, ensuring it remains relevant and effective.
- **Data-Driven Updates:** Insights gathered through the app's analytics tools allow for real-time updates, enabling the app to adapt to evolving user behaviors and preferences.

Long-Term Vision

- By scaling the app for broader markets, Amstelhof could create additional revenue streams by licensing the app to other gyms. This diversification aligns with the organization's long-term strategy for growth and innovation.

6.2 Engagement Strategies for Staff Adoption

Ensuring widespread adoption of the app among staff requires targeted engagement strategies that address potential barriers and foster enthusiasm. The following strategies have been outlined:

- **Involvement in Development:**
 - Staff were actively involved in the focus group and user-driven prototype sketches, ensuring their input was reflected in the app's features. This involvement fosters a sense of ownership and reduces resistance to change.
- **Highlighting Benefits:**
 - Demonstrations and presentations will focus on how the app simplifies tasks, enhances communication, and improves the member experience. Demonstrating clear benefits can increase technology adoption rates among employees (Venkatesh et al., 2016). By showcasing tangible benefits, staff are more likely to embrace the tool.
- **Early Adopters as Champions:**
 - Key staff members who are quick to adapt to the app will be identified as "App Champions." These individuals will assist their colleagues, share best practices, and promote the app's value.

6.3 Internal Communication and Future Training Plan

A structured communication and training plan ensures staff are well-prepared to integrate the app into their workflows. The plan includes:

- **Communication Plan:**
 - Pre-Launch Announcements: Clear, engaging communications outlining the app's purpose, features, and benefits will be shared through internal channels such as email and staff meetings.
 - Progress Updates: Regular updates on the app's development and success stories from the pilot phase will maintain interest and momentum.
- **Feedback Channels:** Open channels for staff to provide feedback and share experiences will be established, fostering continuous improvement.
- **Training Plan:**
 - **Hands-On Workshops:** Interactive training sessions will familiarize staff with the app's features and functionality, providing practical experience.
 - **Digital Tutorials:** Step-by-step video guides and an in-app help section will be available for ongoing support.
 - **Role-Specific Modules:** Tailored training modules will be designed for different staff roles, ensuring each team member understands how to leverage the app for their specific tasks.
 - **Follow-Up Sessions:** Regular follow-up training sessions will address any issues, provide updates on new features, and reinforce best practices.

7. Implementation Plan for App Rollout

7.1 Launch Phases and Staff Training

The implementation of the Amstelhof Staff App requires a structured and phased approach to ensure smooth integration into daily operations. This plan outlines the key strategies for a successful rollout, focusing on staff training, communication strategies, and the integration of feedback post-launch. The rollout of the Amstelhof Staff App will focus solely on staff members, ensuring they are well-equipped to integrate the app into their daily workflows.

Launch Phases Timeline:

1. Pre-Launch Preparation (2 Weeks):

- **Internal Testing:** Conduct rigorous internal testing to identify technical issues (1 week).
- **Staff Awareness:** Inform all employees about the app's upcoming launch via internal communication channels such as staff meetings, emails, and bulletin boards (1 week).
- **Resource Distribution:** Prepare user guides, FAQs, and training materials tailored to staff roles.

2. Pilot Phase (2 Weeks):

- **Early Testing:** Select a small group of staff across various roles (e.g., managers, trainers, front-desk staff) to test the app.
- **Feedback Collection:** Gather detailed feedback from pilot users to identify usability and functionality improvements.
- **Adjustments:** Incorporate feedback into a refined version of the app before the full rollout.

3. Full Launch (3 Weeks):

- **Deployment:** Roll out the app to all staff members and provide immediate support for any technical issues.
- **Monitoring:** Track usage metrics and collect additional feedback during the first two weeks to identify further refinements.

Staff Training Plan Timeline:

1. Interactive Training Workshops (1 Week):

- Conduct department-specific training sessions tailored to each staff group's responsibilities.
- Provide hands-on practice with key app features such as task management, communication tools, and member interaction tracking.

2. Role-Specific Training Modules (2 Weeks):

- Develop asynchronous video tutorials and digital guides for flexibility.
- Include training scenarios based on real-life tasks staff frequently encounter.

3. Ongoing Support (Continuous):

- Assign an internal support team to assist staff with troubleshooting.
- Schedule refresher training sessions every quarter to address updates and reinforce best practices.

Research indicates that involving end-users in phased rollouts and providing comprehensive training can improve adoption and minimize resistance to new technologies (Venkatesh et al., 2016).

7.2 Staff-Focused Communication Strategy

Pre-Launch Communication (1 Week):

- Share internal announcements via email and meetings to inform staff about the app's purpose, features, and launch timeline.
- Highlight specific pain points the app addresses, such as improved task management and streamlined communication.

Launch Week Updates (1 Week):

- Provide daily updates during the launch to address common questions and showcase early success stories from pilot users.
- Use internal channels such as team chats or bulletin boards to maintain engagement.

Feedback Opportunities (Post-Launch – Ongoing):

- Set up dedicated feedback channels, such as anonymous surveys and a support email, to gather staff input on app functionality.
- Create an in-app feedback feature to streamline the feedback process and encourage ongoing participation.

Research highlights the importance of clear internal communication in fostering technology adoption and ensuring staff understand the value of new tools (Davenport & Harris, 2017).

7.3 Feedback Integration After Rollout

Ongoing Feedback Collection (First 3 Months):

- Use built-in app tools like the Task Management Tracker and Feedback Tracker to gather real-time data on app usage and staff satisfaction.
- Conduct biweekly surveys among staff to collect additional qualitative insights on usability and performance.

Iterative Refinement (Continuous):

- Review feedback monthly to prioritize feature updates and improvements.
- Develop a six-month roadmap for app updates, ensuring the app evolves to meet staff needs.

Transparent Internal Reporting (Quarterly):

- Share quarterly updates with all staff, summarizing feedback received, issues resolved, and planned improvements.
- Include usage statistics and examples of how the app has enhanced staff efficiency and member engagement.

8. Financial Analysis

8.1 Costs of App Development and Iterations

Based on communication with AppVin Technologies (2024), the estimated cost for developing the "Amstelhof Connect" app ranges between **€17,000–€22,000**. This estimate includes the implementation of the following features:

- **Personalized Notifications:** Automated alerts for staff about member birthdays, milestones, and special occasions.
- **Member Journey Tracking:** Tools to monitor member engagement, retention metrics, and trial period progress.
- **Automated Greetings:** Notifications for staff to deliver personalized welcomes to trial members.
- **AI-Powered Personalization:** AI-driven suggestions for engagement and communication based on member behavior.

Timeline for Development: The development timeline is projected to take between **8–13 weeks**, depending on the complexity of the iterations and additional refinement phases.

Breakdown of Development Costs:

1. **Feature Design and Implementation:** Includes personalized notifications, member tracking, and automated greetings (€8,000–€12,000).
2. **AI Integration:** Development of AI-powered personalization tools (€5,000–€6,000).
3. **Testing and Refinement:** Usability testing, feedback collection, and iteration refinements (€4,000).

Additional Considerations:

- Maintenance and support costs post-launch.
- Potential licensing fees for AI tools and backend infrastructure.

According to AppVin Technologies, the costs are comprehensive and account for the app's core functionality and scalability (AppVin Technologies, 2024).

8.2 Return on Investment Projections

The "Amstelhof Connect" app is designed to address internal operational challenges, with a focus on improving staff efficiency and member engagement. However, there are also opportunities for generating a return on investment (ROI) through future monetization strategies.

Short-Term ROI: Operational Efficiency

- **Cost Savings:** By streamlining workflows, reducing reliance on fragmented systems, and automating manual tasks, the app minimizes administrative overhead and frees up staff time for more meaningful member interactions. Research highlights that automation can reduce operational costs by up to 30% in service industries (Davenport & Harris, 2017).
- **Enhanced Member Retention:** Improved engagement and personalized experiences can directly reduce member churn. A reduction in churn by just 5% can result in profit increases of 25–95% (Reichheld & Schefer, 2000).

Long-Term ROI: Monetization Opportunities

1. Licensing to Other Gyms:

- The app can be sold or licensed to other gyms as a customizable solution for their staff.
- Potential pricing model: Annual subscription fees or one-time implementation costs. For example, licensing the app to 10 gyms at €5,000 annually could generate €50,000/year.
- This long-term strategy positions Amstelhof not only as a fitness center but also as a provider of innovative software solutions in the fitness industry.

2. Integration with Third-Party Platforms:

- Collaborations with fitness equipment manufacturers or wellness service providers could add revenue streams through partnerships or co-branding opportunities.

3. Training Modules for Staff Development:

- Offer premium features such as advanced staff training modules for an additional cost.

ROI Projections Over Three Years:

- **Year 1:** Initial cost recovery through operational efficiency and improved retention.
- **Year 2:** Potential monetization begins through licensing to other gyms or fitness businesses.
- **Year 3:** App becomes a revenue-generating asset, contributing to Amstelhof's diversification strategy.

9. Control and Evaluation

9.1 Key Performance Metrics for the App

To evaluate the success and effectiveness of the Amstelhof Staff App, the following key performance metrics (KPIs) have been established:

1. Operational Efficiency Metrics:

- **Reduction in Task Completion Time:** Measure the average time required to complete staff tasks before and after app implementation. Research shows that integrated systems can reduce task times by up to 30%, improving workflow efficiency (Davenport & Harris, 2017).
- **Error Rate in Task Management:** Track the number of task-related errors (e.g., missed follow-ups or incorrect scheduling) to assess operational accuracy improvements.

2. Staff Engagement Metrics:

- **App Adoption Rates:** Monitor the percentage of staff actively using the app for daily operations. High adoption rates are a direct indicator of the app's usability and relevance (Venkatesh et al., 2016).
- **Employee Satisfaction:** Conduct regular surveys to gauge staff satisfaction with the app, emphasizing ease of use and its impact on daily workflows. Research has shown that satisfied employees are 12% more productive (Oswald et al., 2015).

3. Member Engagement Metrics (Indirect):

- **Retention Rates:** While the app is for staff, its impact on improving member engagement can be indirectly measured through increased retention rates and positive feedback from members.
- **Service Quality Ratings:** Track changes in member satisfaction surveys related to staff performance, as the app is expected to enhance personalized interactions.

- 4. **Feedback Resolution Time:** Measure the time taken by staff to resolve issues flagged by members or address feedback provided through the app.

9.2 Plan for Continuous Testing and Feedback

Continuous improvement of the Amstelhof Staff App requires an iterative feedback and testing strategy:

- **Regular Usability Testing:**

- Conduct quarterly usability tests with staff to identify any friction points or new feature requests. Regular testing ensures the app evolves alongside the operational needs of the staff (Albert & Tullis, 2022).
- Utilize predefined tasks (e.g., scheduling shifts, resolving member feedback) to assess the app's functionality and user experience.

- **In-App Feedback Collection:**

1. Introduce an integrated feedback form within the app, allowing staff to submit suggestions, report bugs, or request features in real-time.
2. Studies indicate that collecting real-time feedback from users improves system satisfaction and engagement (Venkatesh et al., 2016).

- **Staff Workshops:**

1. Host bi-annual workshops to gather qualitative feedback from staff and encourage open discussions about their experiences with the app.
2. These workshops will also serve as an opportunity to showcase new features and provide refresher training as needed.

- **Metrics Monitoring and Reporting:**

1. Implement a dashboard to continuously monitor KPIs, such as task completion times, staff satisfaction, and error rates. Real-time data ensures that any performance issues can be addressed promptly.
2. Regularly report these findings to the management team, highlighting areas for improvement and successes.

- **Iterative Updates:**

1. Based on feedback and testing results, release quarterly updates that address identified pain points and introduce enhancements. This agile approach ensures the app remains relevant and valuable (Agile Alliance, 2020).

10. Ethical and Legal Considerations

10.1 Data Privacy and Security Compliance

Ensuring compliance with data privacy and security regulations is paramount for the successful implementation of the Amstelhof Staff App, particularly as it operates in the Netherlands and the broader European Union under the **General Data Protection Regulation (GDPR)** framework. The app has been designed with stringent privacy and security measures to protect staff and member data.

- **GDPR Compliance:**

- The app adheres to GDPR principles, such as data minimization, purpose limitation, and transparency (European Union, 2016). For instance:
 - Only necessary data, such as member attendance patterns and milestones, is collected and stored.
 - Staff are informed about how their data is used, and their consent is obtained before storing any personal information.
- A privacy policy will be embedded within the app, outlining the type of data collected, its purpose, and users' rights regarding data access, rectification, and deletion.

- **Data Encryption:**

- All personal and sensitive information, including member attendance and staff schedules, will be encrypted during storage and transmission to prevent unauthorized access.
- Encryption protocols align with industry standards, ensuring robust protection against data breaches (Kizza, 2017).

- **Access Control:**
 - A role-based access control (RBAC) system ensures that only authorized personnel can access specific app features and sensitive data, reducing the risk of misuse.
 - Staff access levels are tailored to their roles, minimizing unnecessary exposure to confidential information.
- **Data Breach Protocol:**
 - In compliance with GDPR, Amstelhof will implement a structured data breach response plan to detect, report, and mitigate breaches within 72 hours, as required by law (European Union, 2016).
- **Secure System Design:**
 - The app incorporates multi-factor authentication for staff login, ensuring that only authorized personnel can access the system.

Regular **vulnerability assessments** and **penetration testing** will be conducted to identify and mitigate security risks (Whitman & Mattord, 2018).

- **Access Control:**
 - A role-based access control (RBAC) system ensures that only authorized personnel can access specific app features and sensitive data, reducing the risk of misuse.
 - Staff access levels are tailored to their roles, minimizing unnecessary exposure to confidential information.
- **Data Breach Protocol:**
 - In compliance with GDPR, Amstelhof will implement a structured data breach response plan to detect, report, and mitigate breaches within 72 hours, as required by law (European Union, 2016).
- **Secure System Design:**
 - The app incorporates multi-factor authentication for staff login, ensuring that only authorized personnel can access the system.

Regular **vulnerability assessments** and **penetration testing** will be conducted to identify and mitigate security risks (Whitman & Mattord, 2018).

10.2 Ethical Design Practices

The Amstelhof Staff App reflects ethical principles in its design and development to ensure a fair and user-centric approach.

- **Transparency and Accountability:**
 - Users are kept informed about how the app functions and how their data is used. For example, staff will have access to clear documentation and in-app notifications regarding data processing practices.
 - Data logs will track access and changes to ensure accountability and prevent misuse.
- **Non-Invasive Data Collection:**
 - The app limits data collection to non-sensitive information directly related to gym operations, avoiding invasive or irrelevant data points.
 - Data collection practices comply with ethical standards, ensuring members and staff feel respected and secure (Crawford & Schultz, 2021).

- **Accessibility and Inclusivity:**
 - The app has been designed to be accessible to staff with varying technical skills and disabilities. Features include:
 - Clear, intuitive navigation and instructions.
 - Compatibility with screen readers for visually impaired users.
 - Inclusive design ensures that all staff members can benefit from the app regardless of their technical expertise (Bennett et al., 2018).
- **Ethical AI Implementation:**
 - AI-powered features in the app are designed to avoid bias and ensure fairness. For example:
 - Member engagement suggestions are based on objective data, such as attendance and milestones, rather than subjective or discriminatory criteria.
 - Regular audits will be conducted to evaluate the neutrality and effectiveness of AI algorithms.
- **Employee-Centric Development:**
 - The app prioritizes staff well-being by reducing administrative burdens, enabling more time for meaningful interactions with members.
 - Ethical considerations also include ensuring staff input is continuously integrated, fostering a sense of ownership and trust in the app's functionality.

11. Conclusion and Recommendations

11.1 Summary of App Development and Iterative Process

The development of the Amstelhof Staff App followed a structured and iterative process designed to address the organization's operational challenges and enhance staff efficiency. The project emphasized a user-centric approach, incorporating feedback from Amstelhof's staff and members through multiple research methods, including interviews, surveys, focus groups, and usability testing.

- **Iterative Development Approach:**

- Each iteration built on insights gathered from earlier research and testing phases, ensuring the app's features aligned with user needs and operational objectives.
- Key milestones included the integration of features such as the Email Center, Happiness Index, Feedback Feed, and tools for staff collaboration and task management. These features addressed challenges like fragmented communication systems, inefficient workflows, and the lack of personalized member engagement tools.

- **Impact of Research-Driven Development:**

- The app's development process demonstrated the importance of prioritizing user feedback in creating effective solutions. For instance, the usability test highlighted the app's strength in meeting staff needs while identifying opportunities for aesthetic customization to enhance usability.
- By continuously refining the app based on real-world feedback, Amstelhof Connect embodies a solution that is both functionally robust and aligned with the organization's values of personal attention and high-quality service delivery.

Through this iterative and collaborative process, the Amstelhof Staff App is poised to streamline staff operations, foster deeper member relationships, and support the organization's strategic goals.

11.2 Future Steps for Amstelhof Connect

To maximize the potential of Amstelhof Connect, several strategic steps have been outlined for its short-term implementation and long-term evolution:

1. Short-Term Goals:

- **Feedback Integration:** Post-launch feedback from staff will be collected systematically through in-app forms and workshops to identify any usability issues or feature gaps.
- **Continuous Training:** Refresher training sessions will be conducted periodically to ensure all staff members are confident in using the app's features effectively.
- **Performance Monitoring:** Key metrics such as task completion times, staff satisfaction, and retention rates will be tracked to measure the app's impact and identify areas for improvement.

1. Mid-Term Goals:

- **Feature Enhancements:** Based on ongoing feedback, additional features such as theme customization, expanded reporting tools, and integration with third-party fitness platforms could be developed.
- **Staff Engagement Programs:** Initiatives like gamification and recognition programs could be introduced to further enhance staff engagement with the app.

1. Long-Term Goals:

- **Licensing the App:** Amstelhof could explore licensing Amstelhof Connect to other gyms and fitness centers, creating a potential revenue stream. Licensing would involve customizing the app for different organizational needs while retaining its core functionalities.
- **AI Advancements:** Expand the use of AI for predictive analytics to enhance decision-making, such as predicting member engagement trends or optimizing staff scheduling.

Scalability: Ensure the app can scale to support a growing number of users, including potential integration with additional facilities or partner organizations.

The development and deployment of Amstelhof Connect represent a significant step forward in modernizing internal operations while aligning with Amstelhof's mission to foster personal connections and provide high-quality service. The outlined future steps ensure that the app remains a dynamic and valuable tool, capable of adapting to evolving organizational needs and market opportunities.

Employee Interview Insights

Deadline

12/11/2024

Assigned to

Niklas Forget

Duration

STEP 1: HYPOTHESIS

We believe that

the current systems used by Amstelhof employees have inefficiencies, particularly regarding personal engagement with members and data management.

Critical:

STEP 2: TEST

To verify that, we will

conduct interviews with employees to gather insights on their daily tasks, the tools they use, and their biggest challenges.

Test Cost:

Data Reliability:

STEP 3: METRIC

And measure

the frequency of pain points mentioned, time spent on manual tasks, and features employees wish they had.

Time Required:

STEP 4: CRITERIA

We are right if

employees consistently mention time-consuming tasks, fragmented systems, and desire for personalized member management tools.

Test Name User-Driven Prototype

Deadline 12/11/2024

Assigned to Omar Abdulghani & Niklas Forget

Duration

STEP 1: HYPOTHESIS

We believe that

employees will have valuable input on designing an app that can better help them manage tasks and improve member interactions.

Critical:

STEP 2: TEST

To verify that, we will

ask employees to draw or describe their ideal app features that would help them improve efficiency and personalization.

Test Cost:

Data Reliability:

STEP 3: METRIC

And measure

the diversity of app feature suggestions, common needs expressed, and potential overlaps with our current design.

Time Required:

STEP 4: CRITERIA

We are right if

if employees actively propose features that align with our current prototype or suggest enhancements to core functionalities.

Personal Connection and
Recognition Survey

Deadline

12/11/2024

Assigned to

Niklas Forget & Omar Abdulghani

Duration

STEP 1: HYPOTHESIS

We believe that

Understanding members' preferences for personal recognition and communication will reveal opportunities to improve customer satisfaction and loyalty.

Critical:

STEP 2: TEST

To verify that, we will

We will conduct a survey with questions targeting members' personal experiences and preferences regarding staff interactions and personalized communication.

Test Cost:

Data Reliability:

STEP 3: METRIC

And measure

The number of responses, recurring themes in preferences, and the correlation between personal recognition and perceived satisfaction or loyalty.

Time Required:

STEP 4: CRITERIA

We are right if

The survey identifies clear areas where members desire improvement or new initiatives (e.g., personalized communication types or recognition actions).

Learning Card

Initial Needs for Streamlined Communication

Date 15/11/2024 g

Person Responsible Niklas Forget & Omar Abdulghani

STEP 1: HYPOTHESIS

We believed that

We believed that introducing widgets to centralize communication and feedback, such as the Email Center, Happiness Index, and Feedback Feed, would address gaps in member tracking and personalized interactions.

STEP 2: OBSERVATION

We observed

We observed that staff appreciated having all key member information in one place, including notifications about member birthdays, milestones, and feedback. However, there was confusion regarding the depth of information visible in the initial designs.

STEP 3: LEARNINGS AND INSIGHTS

From that we learned that

From that, we learned that while centralized widgets improved accessibility, clearer labeling and a more intuitive design for the Happiness Index and Feedback Feed were necessary.

Required: ☒ ☒ ☒

STEP 4: DECISIONS AND ACTIONS

Therefore, we will

Therefore, we will enhance the labeling system for clarity and streamline widget interfaces to ensure better navigation and faster staff responses.

Learning Card

Improved Personalization through AI Email Assistance *Date* 15/11/2024 *g*

Person Responsible Niklas Forget & Omar Abdulghani

STEP 1: HYPOTHESIS

We believed that

We believed that adding AI-assisted features to the Email Center would help staff efficiently manage personalized member communications, including recommendations and milestone tracking.

STEP 2: OBSERVATION

We observed

We observed that AI suggestions for email content were well-received, particularly for time-saving purposes, but staff expressed concerns about the limited customization of AI-generated messages.

STEP 3: LEARNINGS AND INSIGHTS

From that we learned that

From that, we learned that while AI-assisted emails increased efficiency, staff preferred having more control over message templates and personalization.

STEP 4: DECISIONS AND ACTIONS

Therefore, we will

From that, we learned that while AI-assisted emails increased efficiency, staff preferred having more control over message templates and personalization.

 Strategyzer

Enhanced Focus on Member Motivation

Date 15/11/2024 

Person Responsible Niklas Forget & Omar Abdulghani

STEP 1: HYPOTHESIS

We believed that

We believed that a Member Interaction & Follow-Up Center, with indicators for motivation levels and activity tracking, would enhance personalized follow-ups and increase member retention.

STEP 2: OBSERVATION

We observed

We observed that staff found the motivation indicators and visual data (e.g., consistency of gym visits and class bookings) helpful for identifying members needing encouragement. However, they also requested simpler visual representations for faster decision-making.   

STEP 3: LEARNINGS AND INSIGHTS

From that we learned that

From that, we learned that while motivation tracking is valuable, the interface should be simplified to reduce cognitive load and improve usability.

Action Required:
☒ ☒ ☒

STEP 4: DECISIONS AND ACTIONS

Therefore, we will

Therefore, we will redesign the tracking dashboard with more intuitive visuals and provide quick-access options for follow-ups.

Learning Card

Simplified Collaboration Tools for Staff Efficiency

Date 15/11/2024 g

Person Responsible Niklas Forget & Omar Abdulghani

STEP 1: HYPOTHESIS

We believed that

We believed that providing tools for team collaboration, task assignments, and schedule visibility would improve staff coordination and reduce operational inefficiencies.

STEP 2: OBSERVATION

We observed

We observed that staff appreciated having a centralized platform for task delegation and scheduling but found the initial whiteboard-style task interface cluttered and hard to navigate.

STEP 3: LEARNINGS AND INSIGHTS

From that we learned that

From that, we learned that while task management features are critical, a cleaner and more organized interface is necessary to encourage adoption.

STEP 4: DECISIONS AND ACTIONS

Therefore, we will

Therefore, we will simplify the task interface, ensuring clear task ownership indicators and providing a search/filter function for easier navigation.

4. Planning

Amstelhof Project Planning

Timeline: November 25, 2024 - December 10, 2024

Deadline for Completion: December 10, 2024

Final Deadline: December 16, 2024

Planning and Task Overview

Week 1: November 25 - December 1

Tasks:

1. Start drafting **Section 1: Introduction:**
 - Include the purpose of the strategic marketing plan.
 - Add the UoS1 recap to explain the selection of the app concept.
2. Draft **Section 2: Research and Testing Insights:**
 - Summarize the four experiments.
 - Highlight the importance of user feedback in iterative development.
3. Begin work on the **Figma prototype**, focusing on the first three iterations:
 - Email Center.
 - Enhanced Email Center with AI.
 - Member Interaction & Follow-Up Center.

Goals by End of Week 1:

- Complete Sections 1 and 2 drafts.
 - Have a functional design for the first three iterations in Figma.
-

Week 2: December 2 - December 6

Tasks:

1. Write **Section 3: Experiment Details and Findings:**
 - Document the objectives, methodology, and key insights for each experiment.

- Include interview questions, survey results, focus group feedback, and usability test findings.
- 2. Continue developing the **Figma prototype**, focusing on:
 - Staff Center.
 - Communication & Updates Hub.
- 3. Begin **Section 4: Iterations and Prototype Enhancements**:
 - Document changes implemented after each experiment.
 - Add visuals/screenshots from the Figma prototype.

Goals by End of Week 2:

- Finish Section 3 and start Section 4.
 - Complete designs for the Staff Center and Communication Hub iterations in Figma.
-

Week 3: December 7 - December 10

Tasks:

1. Finalize **Section 4: Iterations and Prototype Enhancements**:
 - Include descriptions and visuals for all seven iterations.
 - Summarize the finalized prototype features.
2. Write remaining sections of the report:
 - **Section 5: Strategic Summary.**
 - **Section 6: Marketing Mix and Strategy Development.**
 - **Section 7: Implementation Plan for App Rollout.**
 - **Section 8: Financial Analysis.**
 - **Section 9: Control and Evaluation.**
 - **Section 10: Ethical and Legal Considerations.**
 - **Section 11: Conclusion and Recommendations.**
3. Review and refine the **Figma prototype** for final presentation.

Goals by End of Week 3:

- Complete all sections of the document.
 - Finalize and align the Figma prototype with the report.
-

Buffer Period: December 11 - December 16

5. Test 1: Usability Test Results

Date Conducted: November 12, 2024

Participants:

A group of Amstelhof staff, including roles such as personal trainers, front desk staff, and managers, participated to ensure diverse perspectives on app usability.

Objective

The usability test aimed to evaluate the functionality and user experience of the initial prototype of the Amstelhof Staff App. It focused on determining how effectively the app met staff needs and identifying any areas requiring improvement.

Testing Setup

- Environment: Conducted in a controlled environment with access to tablets, replicating staff usage scenarios.
- Prototype: Initial version of the Amstelhof Staff App, designed with the Figma platform.
- Tasks: Participants were required to complete key app functions:
 - a. Accessing the Member Interaction & Follow-Up Center.
 - b. Sending a personalized email through the Email Center.
 - c. Navigating the Feedback & Well-Being Tracker.
 - d. Managing tasks in the Staff Coordination Center.

Key Findings

1. Ease of Navigation:
 - Most participants found the app intuitive and easy to navigate.
 - Clear labeling of features and visual cues (e.g., color coding) helped streamline usability.
2. Feedback on Design:
 - The majority of participants appreciated the visual design but felt it was slightly too colorful.
 - Suggested adding a "Theme Customization" option for a more subdued palette.
3. Efficiency and Functionality:
 - Participants completed tasks efficiently, indicating alignment between the app's design and staff workflows.
 - The automated features, such as email suggestions and member tracking, were praised for reducing administrative workload.
4. Identified Issues:
 - No critical usability issues were reported.
 - Some participants recommended reordering features for more intuitive access.

Actionable Recommendations

1. Theme Customization: Introduce a toggle for light and dark modes or theme adjustments.
2. Feature Reordering: Slight adjustments in feature placement for easier access to frequently used functions.
3. Further Testing: Conduct additional tests with a larger staff sample for further refinements.

6. Test 2: Survey Link & Results

7. Test 3: Focus Group Notes and Prototype Sketches

Date Conducted: November 12, 2024

Participants:

Amstelhof staff members, including trainers, front desk personnel, and managers.

Objective

To gather insights and ideas from Amstelhof staff for the development of the "Amstelhof Connect" app. The session aimed to identify pain points in current workflows and co-create solutions tailored to staff needs.

Discussion Points and Key Feedback

1. Challenges in Current Systems:

- Staff expressed frustration with using multiple apps for different tasks, leading to inefficiencies and communication gaps.
- Difficulty in tracking member engagement and providing timely feedback or recognition.

2. Feature Suggestions:

- Member Interaction & Follow-Up:
 - Add a motivational indicator for members (e.g., color-coded engagement levels).
 - Introduce prompts for staff to follow up with members based on attendance or milestones.
- Staff Coordination:
 - Include a schedule overview to track colleague shifts.
 - Create a whiteboard for sharing ideas and updates.
 - Add a task assignment feature with accountability tracking.
- Feedback Integration:
 - Centralize feedback collection from kiosks, surveys, and online platforms.
 - Use color coding for feedback categories to highlight areas of concern or improvement.

3. Design Preferences:

- Staff appreciated intuitive navigation and emphasized the importance of visually clear layouts.
- Suggested adding flexibility to customize features and themes to cater to individual preferences.

4. Workflow Efficiency:

- Staff highlighted the need for automation, particularly in sending personalized emails and tracking member interactions.
- Emphasized the importance of a unified platform to eliminate redundancies.

Prototype Sketches

- Staff sketched their vision for key app features:
 - A dashboard combining member engagement metrics and staff task management.
 - Simplified navigation with distinct tabs for primary functions like scheduling, feedback, and communication.
 - A messaging hub for seamless staff interaction.

Key Takeaways

- The focus group reinforced the importance of creating a unified, intuitive platform tailored to staff needs.
- Insights gathered directly influenced iterations, particularly for the Member Interaction & Follow-Up Center and Staff Coordination features.
- Staff actively contributed ideas that shaped the prototype, ensuring it aligns with real-world usage scenarios.

8. Test 4: Interviews Q&A from Focus Group

Date Conducted: November 12, 2024

Questions and Staff Responses

1. What system are they using right now?
 - Staff are currently using a combination of manual processes, spreadsheets, and multiple apps (e.g., email tools, booking software) to manage tasks and member engagement.
 - A fragmented approach was highlighted as a key challenge, with no unified platform to streamline workflows.
2. When they come to Amstelhof, what do they do, and what do they manage?
 - Tasks include welcoming members, managing bookings, conducting training sessions, and addressing member concerns.
 - Staff also handle administrative duties such as sending birthday messages, maintaining attendance records, and logging feedback.
3. How do they manage personal contact with members (e.g., birthdays)?
 - Staff rely on manual calendars, spreadsheets, or email tools to track birthdays and send personalized messages.
 - Several staff noted that this process is time-consuming and often leads to missed opportunities for personalized interactions.
4. What data do you use right now, and what data would you like to have?
 - Current Data Used:
 - Membership duration
 - Class bookings and attendance
 - Basic member details (e.g., birthdays)
 - Desired Data:
 - Member engagement levels
 - Feedback and satisfaction metrics
 - Personalized fitness progress tracking
5. What do you like the most/least about the current systems you use?
 - Likes:
 - Availability of member data (although fragmented).
 - Dislikes:
 - Difficulty in accessing and consolidating data from multiple sources.
 - Lack of automation, resulting in repetitive manual tasks.
6. What do you miss right now in the current systems and would like to have?
 - A centralized platform for member data and task management.
 - Automated reminders for key dates (e.g., membership anniversaries, follow-ups).
 - Features for tracking member satisfaction and feedback in real-time.

- What is the most time-consuming task on the current system?
 - Manually sending personalized messages for birthdays, anniversaries, and follow-ups.
 - Consolidating member feedback from various sources like social media, surveys, and in-person comments.
- What are the mandatory features that must be in the system?
 - A calendar for tracking member milestones.
 - Automated notifications for personalized greetings and follow-ups.
 - A task management tool for assigning and monitoring responsibilities.
 - Feedback integration and analytics for member satisfaction.
- How many hours per week do you spend on maintaining personal connections? / Personalized communication?
 - Responses varied between 5–10 hours per week per staff member.
 - Staff expressed a strong desire to reduce this time by automating repetitive tasks and improving workflow efficiency.
